North Star Bay ff.
13 July. Thursday.

Clear and cloudless. Light northerly wind or calm. Temp at the house at noon 39° . A beautiful day and a great relief from those at the ship. Shortly after 6 ft. Rasmussen stopped here on his way to the top of Umanak Butte (Mt. Dundas) with Boseman. I accompanied him to the base of the steep slope and then turned back. Spent most of day arranging stuff, writing and visiting. After dinner made call on Rasmussen with Elblaw. Koch showed me his ^{pencil} sketches of the coast line of Melville Bay from Devil's Throat all the way around to Cape York. They are excellent and are particularly good in view of the trying

circumstances under which they (2) were made, during his and Rasmussen's sledge trip in the first half of June. Novrana served delicious coffee. The three Danes came back to our house with us and we had some music on the Victrola. They have good taste in music, i.e. Rasmussen and Koch, particularly the latter.

Eckblaw has been feeling more or less ill for three weeks, suffering from an attack of the grippé transmitted by one of his letters from home, he thinks. Is much better now, but has a badly infected middle finger, on the left hand, arising from a slight wound received more than a month ago. Danger of a stiff outer joint as a result. Infection resulted from very painful handling walrus

L. L. FAIRBANKS & CO.

14 July. Friday. [3]

Cloudy, but very pleasant. Fog on bay in morning. Heavy clouds ^{late} in p.m. Temp. min 31° ; 9a. 38° ; 12m. 39° ; 4p. 42° ; 8p. 39° . Slept better last night than for months on board the ship. Am glad that I made the change, because life is far more enjoyable here for me than there, although I have fewer conveniences and no springs to my bed.

Ekblaw told me yesterday that Mene had no occasion for complaint regarding the trip over to Parker Snow Bay. Mene had had a good breakfast here at the house the morning of the day that he started. He had come in saying that Rasmussen was not going to go over that day because it was so warm and that he (Mene) could not wait

any longer. Hence he was going to get Egingwah bade to take him across. Ek & Dr. went out into the field and were gone 9 hours. When they returned, they found that Mene had stalked out on foot. He therefore had no occasion whatever for finding fault ^{with} because Ekblaw ^{for} giving him no food for the journey.

He was through with working for us on 15 June, but Ekblaw assures me that he would of course have given Mene food for the journey, had he known the need of it.

Dr. got a young seal.

15 July. Saturday

Clear in the early morning but foggy from about 7 a.m. till afternoon then clear and beautiful again. Light S. wind at times, with intervals of calm.

L. L. FAIRBANKS & CO.

Temp. min. 31° , 8a. 32° ; 12m. 37° ; 4p. 39° ; 8p. 35° (5)

My first day as cook. Got along all right, apparently, to the surprise of Captain Conner, but the menu was simple - bft. oatmeal, fried ham, coffee + Dr. Hunt's bread (he is "official bread maker" to the party); luncheon, canned corn, cold meat, peaches, tea; dinner, boiled seal, tomatoes, stewed prunes, tea.

Called on Peter + Koch this afternoon. Fired at target at 100 yds., managed to hit outside the circles ^{= 1} three times in five shots. Not much of a marksman!

16 July. Sunday.

Clear night and cloudless, beautiful morning, with light N. W. wind. Wind grew stronger and veered to W. about

noon and sky became thinly overcast 16
and cloudy about 2 o'clock.

Temp. min 28°; 8 a. 34°; 12 m. 35 $\frac{1}{2}$ °; 4 p. 38°; 8 p. 35°

Flags are up to-day - U.S. on ours and
Danish on Peter's. Ek has been alternating
U.S. & Danish flags on our house.

Ek went out botanizing with Koch, having
assured him 105 species of plants from here.

They got 5 last evening and returned at 3:30 today

with 20-25 sp. and the knots' nests. This
morning I photographed the habitat of a snow
bunting for Ek. Practised some more with
my rifle and had better results than yesterday.

Wearing my reading glasses, I made a 5; two 3s
and one ¹ ~~outside the circle in~~ [^] four successive
shots.

After dinner we had victrola music
for an hour or more. Ek and I walked
out on the flat from 6 to 8, or thereabouts,
to see the entrenched streams east of

Peter's house and an ^{earth} clay flow 17 and embanked stream on the upper ~~edge~~ ^{edge} of the "Illinois Fields." The raised edges of the short stream are probably caused, according to N. E. E., by differential elevation due to unequal freezing and thawing in the ground upon the uneven surface of the ice table or upon the surface of the rock floor, which is not deeply buried. We passed the graves of ^{two} Danes and three Greenlanders, two of the latter were children of Seehmann Rostach, formerly Peter's assistant or clerk. On our return route we went to Astrup's monument or cenotaph, a cairn of angular blocks of diabase partly covering a ^{great} triangular block of the same rock, all built so as to face the ice.

cap, in accordance with Astrup's [8] last wishes. A gnomon pointing toward the cap surmounts the pile, and a marble slab facing in the same direction bears the simple inscription "Eivind Astrup 1891-1892 1893-1894"

Collected a pretty little shododen-dron, purple blossom. Somewhat like Kalmia, Etz says.

17 July. Monday.

Overcast and thick all morning. Light easterly wind and spitting snow till after 9 o'clock. A few drops of rain about noon, variable wind. Temp. min. 32° ; 8 a. 36° ; 12 m. 38° ; 4 p. 40° ; 8 p. 35°

About 3 p. m. sky was clearer, though still overcast & I photo'd snow bunting at entrance to nest and

young ones in nest for Eddlelaw. (9)
The performances of the parent birds
were interesting to watch, the contest
between their fear of us and their de-
sire to feed their young was so man-
fest. After a half-hour's waiting with
my camera in readiness, I got the
male at the entrance to the nest
with his bill full of crane flies.

More than once we saw the male trans-
fer to the female crane flies which
he had caught.

After dinner I was out in the canoe
for about two hours with Eck & Dr.
we went to an islet near the Eskimo
trappers and I took photos of nest
and three eggs of eider duck and nest
and one egg of the tern. The former
is made of down but the latter is a
mere depression in the gravel. Both are exposed

The ice is getting thin, rotten (10)
and separated in that part of the
bay.

Tuesday 18 July.

Thinly overcast and calm,
followed by light S.S.W. and variable
winds. Foggy late afternoon & evening.
Temp. min. 29° ; 8a. 38° ; 12m. 36° ; 4p. 35° ; 8p. 34°
Out in morning for an hour with Cap-
tain Conner. Photo'd Astrop's monumen.

Dr. Hunt says that by questioning
he learned that the white-coat which
Captain Pickles secured from Erik,
and wh. I later got from Norman,
was taken from the body of the mother
and not from the stomach of a
white whale.

Eck & Dr. were out in canoe this aft
morning and early afternoon. Got a seal.

Peter and Koch spent part of 11
evening here - the war of course occu-
pied part of our conversation. Great
speculation as to time of arrival of
our steamer - I say earliest date
wld be 22^o, probable date 25th.

Peter says 27th. Ek says 5 Aug.
Rasmussen says 6 Aug.

19 July. Wednesday.

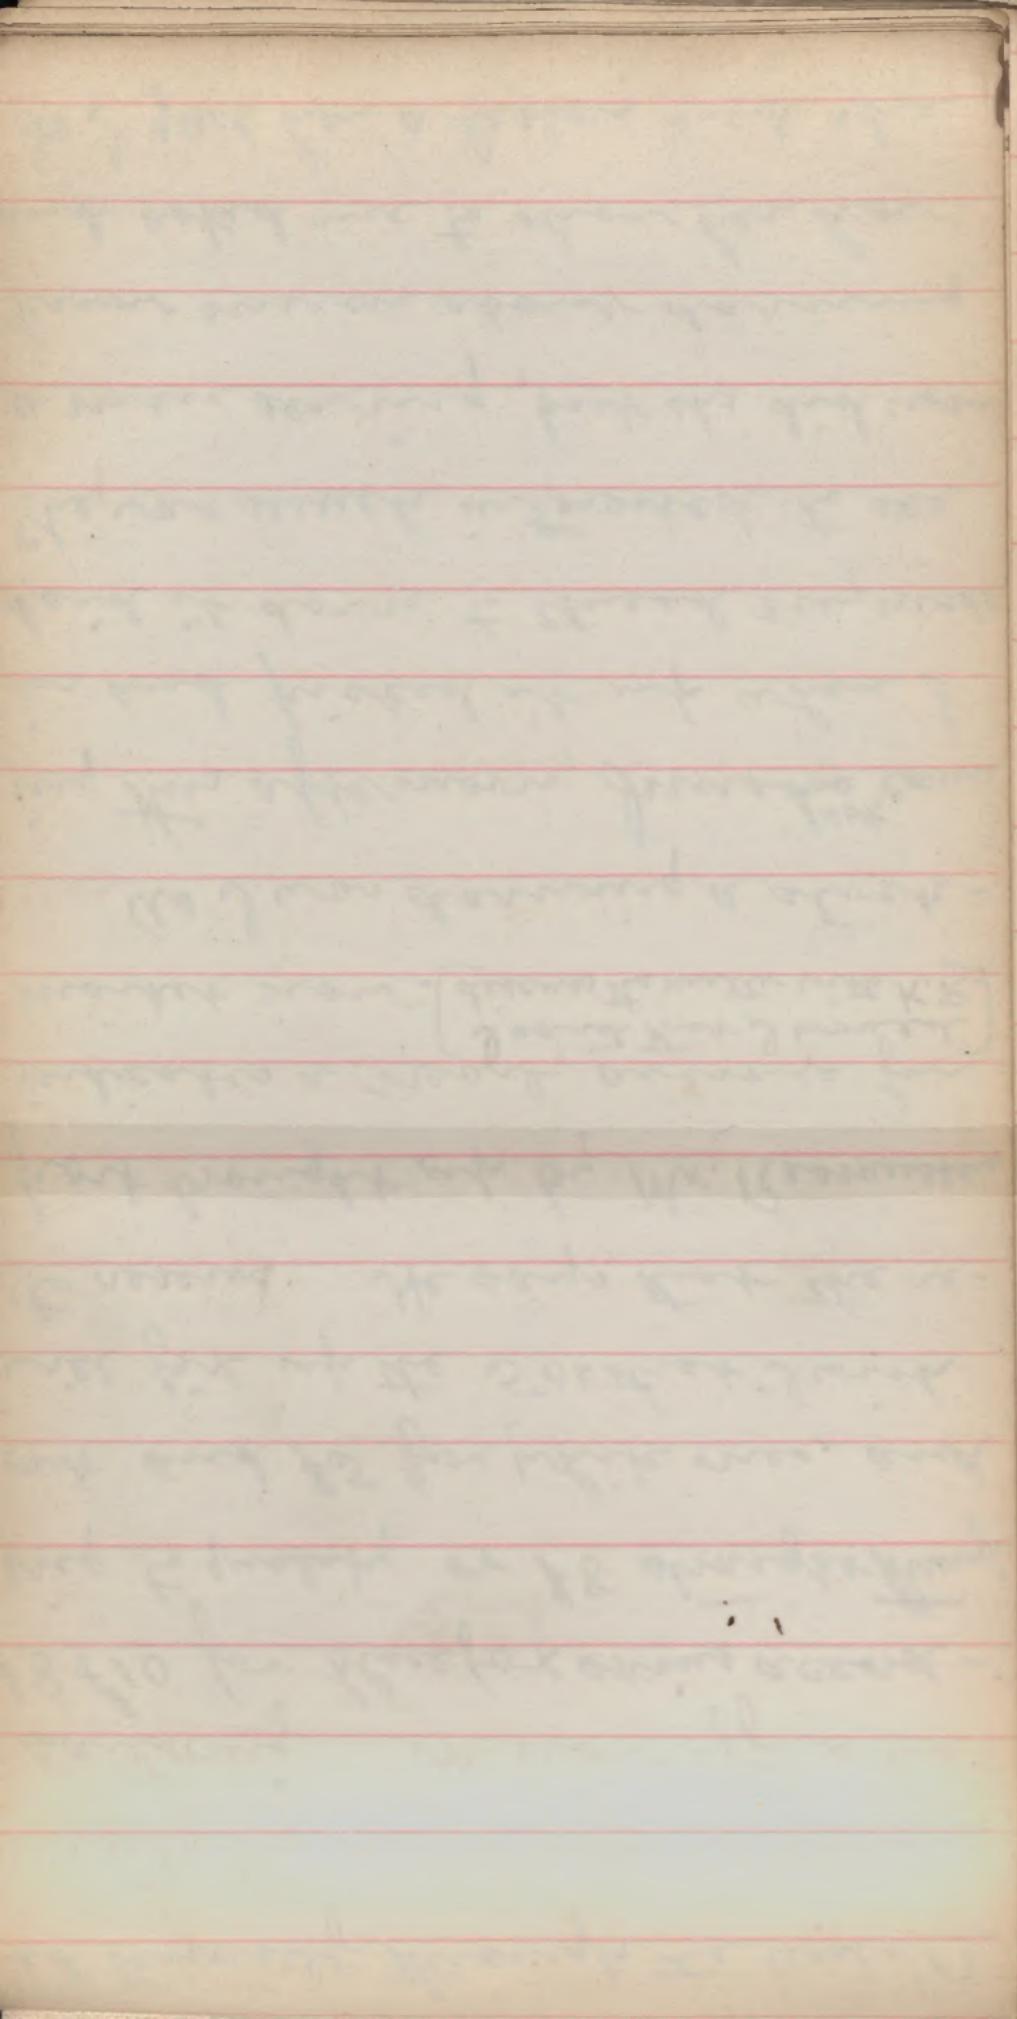

Few cirrus clouds in a.m., cloud-
less afternoon, ^{+ evening} calm or light variable
winds. Low-lying fog about all day.

Temp. min. 29°; 8a. 30°; 12m. 35°; 4p. 35°; 8p. 38°

Peter came over with Koch about
9:30 and the latter went out with
Ek and Dr. for long hike on mountains.
Captain Comer went to the old igloo
refuse heaps to dig. Peter staid
with me till 2:30, telling me some-
thing about his varied life. He help-

ed himself through the uni-¹² versity by newspaper work and sailing. He now offers me \$8 & \$10 for blue fox skins according to quality or \$8 straight through out and \$5 for white ones, and will fix up the 50¢ that I wish to reserve. He says that the report brought up by Mr. Rasmussen indicates a nearly average fur market now. [I said that I would discuss the matter with K.R.]

As I was darning a stocking this afternoon, Imata^{sot} came in and picked it up when I laid it down to thread my needle. She was much interested to see a man sewing, but she did not know much about darning and asked me to show her how. So I gave her a lesson and she

caught on very quickly.

13

Left Sydney first a year ago
to-day at 6 p.m. What a year!

About 7:30 Innakok, Ahnala linguual
and Nawana, the last carrying her
9-day old baby in her hood, started
from the house for the top of the Amnaki.
I took two photos of them before they started
later. The girls went only a short distance and
sat down for a visit out of sight of the house.

Peter read me part of a letter from
Inspector Lindow inquiring about
the report now ^{becoming} current among
the Eskimos and Danes to the effect
that Piawato had been shot, in-
stead of meeting his death in the snow.
Peter thinks that Mac should be
informed of the rumor so that
it may be allayed before our

departure from this region. I (14 said that I would bring the matter to Mac's attention, though the already published report assigned the snow as reason for the death. Peter asked my advice as to his writing a letter to Mac about the matter, but I replied that I did not feel that I could advise him. Evidently doubt has been cast upon the story given out by Mac and Green. Would it not have been better to tell the truth about the event at first and stand by the necessity of what was done? Bad business anyhow and liable to cause severe criticism, if not serious trouble.

20 July. Thursday.

Clear and cloudless or nearly so

all day, but with low lying fog (15)
in the distance which occasionally
sent streamers in to us and even
hid Saunders Island for a short time.
Wind very light fr. south in morning
and from north or northwest in after
noon. A beautiful day.

Temp. min. 30° , 8 a. 38° ; 12 m 38° ; 4 p. 35° ; 8 p. 37°

21 July. Friday.

Clear - no fog in early morning. Some
cirrus and high stratus clouds. Calm.
Became overcast by noon

Temp. min 26° ; 8 a. 32° ; 12 m. 42° ; 4 p. 41° ; 8 p. 37°

Went with Ek over to pond near tipics
at Umanak to photo plants for him
in the morning light.

This morning, like yesterday too in fact,
Dr. S. refrain is "I want to go home. I
want to go home", voicing pretty accu-
rately the thoughts of us all, I think.

about 3 p.m. Hendrik Ohesen and Tobias (16)
and rolls of asbestos
Gabrielsen brought over lumber to begin re-
pairing the roof on "our" house. I was
then going through the victrola records, inven-
toring them, and about 4 o'clock the men
knocked off their work(?) and came in
to listen to the music. The Eskimos
like music to a surprising degree.
Ek and Dr. were ^{out} hunting all afternoon.
They came in shortly after 6 o'clock
without any ugjuk or puisse,
though they had killed a small seal
which they were unable to secure
before it sank. Ek went out again
in the evening with Koch, botan-
izing. They came in soon after 8 o'clock
and we had luncheon before Koch
left. He is an interesting young
man and shows good training
and much promise in geology.

22 July. Saturday.

17

Heavily overcast, thick, calm.

Showers of rain began to fall between 3+4 a.m. and continued all day, some of them being heavy. A really rainy day.

Temp. min 32° ; 8 a. 41° ; 12 m. 37° ; 4 p. 39° ; 8 p. 39°

Rasmussen and his party came in from Saunders Island by boat all except for short stretch of ice over which they dragged the boat the way last evening. He reached our tent at 12:25 this morning and reported completely open water and "no ice" in sight outside Saunders Island. The party was not as successful in hunting as they hoped to be. They got only one walrus and one narwhal (both killed by our Egingiwah), but secured many seals. Egingiwah suffered from an attack of the grippe out there but is better now though he looks thin and tired.

I lay awake for more than three 18 hours after K.R. passed on, hence I have felt rather weary to-day.

This is the first day that I have assigned as the earliest on which the steamer might be looked for. We have seen no sign of her yet - 4:30 p.m. - and I do not really expect her to come before the 25th. North Star Bay itself is still covered with last winter's ice in place, but the ice is becoming very rotten and there are big holes and flools in it, while a lead has opened all the way across from the outer side of the Umanak to the "Canyon", as Ekblaw and Janquary call the exit of the stream coming down from the main ice-cap, beyond the promontory called "Petowik", off which the "North Star" wintered. Called on Rasmussen in the evening.

23 July. Sunday.

69

Overcast. Much nimbus cloud in sky, looking very threatening. South wind began to blow early this morning and has been very strong (6-7) at times during the day.

Temp. Min 34°; 8a. 38°; 12m. 38°; 4p. 38°

My day on as cook. Captain Comer keeps busily at work at his digging in the refuse heap. Poor results to-day, but he generally gets something of interest. After dinner Dr. Hunt and I walked over to the end of the gentle slope on the southwest side of the Umanak.

There is much open water now in Wostenholme Sound, but North Star Bay itself remains almost solidly blocked. Very thick on the ice cap. Generally disagreeable day anyhow. Not likely that the "Clinett" has gone out yet.

24 July. Monday. (20)

Heavily overcast and cloudy all day, with occasionally a little rain. Wind moderate from east or north-east, not strong enough to disturb the ice in the bay. Disagreeable & chilly.

Temp. min. 35° ; 8a. 38° ; 12m. 38° ; 4p. $41\frac{1}{2}^{\circ}$; 8p. 41°

Rasmussen called just as we were finishing breakfast. He fell to on the pancakes and maple syrup with enjoyment. Staid an hour and a half. Interesting man.

I went out in the afternoon and collected some mosses for Mrs. Streeter on the rock terrace a half mile or so ^{north} ~~south~~ of Pete's house. Also got some of the little willow which grows only $1\frac{1}{2}$ - 2' tall and has only two or four leaves.

Noted a fine small surface of diabase showing trigonal and hexagonal parting and some creep down the slope -

25 July. Tuesday.

(21)

Overcast all day, tho' sun almost broke through at midday. Wind E 5-6 in earlier morning, later becoming lighter and variable. Calm evening. Looks like rain.

Temp. min. 38° ; 8a. 43° ; 12m. 44° ; 4p. 45° ; 8p. 46°

Collected mosses around old igloo sites and flowering plants there

Captain Comer had noon and elsewhere - dinner at Pete's house. Somewhat grouchy day with S.C. But why? Don't know.

Called on Rasmussen after dinner. He re-

turned with me to listen to music. EK &

Dr. came in about 9:30 from seal hunting

and K.R. staid to chat with us ^{three} all and

to evening luncheon. Left about 11:20.

Imasok had

No ship on "my" day. light "piblokto".

Began to rain about 11 o'clock. Leaves are beginning to show their autumn colors.

26 July. Wednesday

Rained rather steadily till 9 a.m. or after & remained cloudy and overcast

during remainder of day. Light (22
easterly and S.E. ^{+ S} wind and calm.

Temp. min. 34° ; 8 a. 39° ; 12 m. $36\frac{1}{2}^{\circ}$; 4 p. $39\frac{1}{2}^{\circ}$; 8 p. 39°

Later part of morning went to locality
on lower part of rock plateau about 1 mi.

N.E. of house and collected a lot of the
little two-leaved willow.

Captain Corner keeps industri-
ously at his digging in the old re-
fuse heap, finding enough to re-
ward his industry.

Ekt & Dr. got a seal & Egungwah got one.

27 July. Thursday.

Thick clouds. Overcast. Sun broke
through for a very few minutes a-
bout 8 a.m. Wind S 1. Rather
heavy rain from 2:30 p.m. on.

S. or S.E. gale
from 8 p.m.
last at 10:30

Temp. min 34° ; 8 a. 44° ; 12 m. 45° ; 4 p. 41° ; 8 p. 43°

Wind seemed to be blowing strongly
out in the North Water and it look-

ed stormy out there in the after-⁽²³⁾
noon. Where is our ship?

Try to do something on the narrative
of the "Cluett" voyage every day, but it
is hard work to accomplish anything
of that kind while looking so anxious-
ly for our steamer's arrival.

We had Rasmussen, Frenchen & Koch over
in the evening for a pancake- & music-fest.

All had a good time. Heavy gale from S or
S.E. began to blow about 8 p.m.. This combined
with the high tide (new moon tomorrow) start-
ed the ice out of the bay, making a zone of water
100-150 yds wide along head of bay. Wind
blew max & min thermometers down from
the ~~55~~ nail and broke them. Sharp flurry
of hail about 10:30 p.m. Very heavy
rain at 11:45, like a thunder shower
at home. Ek & I brought our sleeping
gear into the house for the night.

28 July. Friday.

(24)

Still raining a little. Wind S.E. 3-4,
the gale having blown itself out during
the night. Rained hard during night.
Temp. 8a. 44° ; 12m. $46\frac{1}{2}^{\circ}$; 4p. 44° ; 8p. 43°
Ice remains as it was at midnight.
Some grounded icebergs between the Pe-
townik Point and the Umanak seem
to be holding the ice in the bay.
The ice is in two big pans, besides the
numerous cakes along the shore.

Captain Comer has been arrang-
ing the best of his finds on pieces
of thin cardboard in a rough sort
of classification. They look well
and show some good results for the
work that he has been putting in
at the old refuse heap. Rasmussen
et al. were much interested in look-
ing at some of them last evening.

29 July. Saturday.

(25)

Windy overcast and more or less cloudy all day, with sun visible at times. Somewhat showery. Calm, or very light southerly wind.

Temp. 8 a. 43°; 12 m. 44°; 4 p. 39°; 8 p. 39°

Tried experiment of firing rifle bullet at closed can filled with water. It exploded all right showing the incompressibility of the water. One shot at 50 yards. Struck fairly in center.

Got in some work on "Cluett Voyage"

After dinner walked out with Ek, going half way up the slope of the Unangan. The whole isthmus - "Illinois Fields" - is elevated sea bottom composed of diabase beds, pumice and gravel.

At 2 p.m. Tobias & Bozeman began putting the rubber roofing on and worked till near

by midnight, finishing one side all ¹²⁶
but the battening. Such is the way
of working up here! They let all kinds
of good weather go by doing nothing; brought
the stuff over on the 21st and could have
done the work before the rain set in, but
did not; but then, they had the repairing
material here last fall and let the
roof remain in its leaky, ruinous
state all winter, so that snow was
shoveled out of the attic every once
in a while last winter. Peter is
not very methodical.

Returned to tent to sleep.

30 July. Sunday.

Cloudy, but not thick. Some patches
of blue sky visible and sun shining
through once in a while.

Temp. 8 a. 43° ; 2 p. 44° ; 4 p. 43° ; 8 p. 41°

Ek and I started out at 11 a.m. for a walk

up the slopes toward the northeast. (27)
Stopped at Panikpa's old igloo on the
bay not far from (N.E. of) the astroph
monument. A good igloo command-
ing a beautiful view across Wo-
tenholme Sound between Saunders'
Island and the mainland. I won-
der whether the old man appreciated
it. All the igloos at Umanak
look out upon fine views, though
it is not likely that either here or
elsewhere the Eskimos pay much at-
tention to the view in choosing sites
for their dwellings. We continued
our walk up over diabase ledges,
grassy swales and plains and sandy
gravelly earthy débris to the first
group of lakes discharging into "Fall
Creek", whose noisy waters are heard
so plainly from the tufic point.

Turned back at "Fauet Lake", (28
560' above the sea, $2\frac{1}{2}$ - 3 miles from the
house. This lake or pond is in a depression
in one of the numerous fault zones
that traverse this region and is much
deeper than the others in the vicinity, there
being apparently 10-12' or more of water
along southern side. Fall Creek has
cut a pretty little gorge through the
diabase &c down to the sea, descending
fully 500 feet in less than a half mile.
Frost work has greatly aided the
task of breaking down the rocks, -
it is a mighty force in the arctic.

Ek called my attention to a place
in the side of the gorge where water wh.
had been impounded ^{this spring} in the gravel
there forming the bank until it
had acquired force enough to burst
through in a temporary torrent had

carried a considerable amount (29) of débris on to the snow and moved boulders $1\frac{1}{2}$ - 2' in diameter several feet from last winter's resting place. Solifluction has done much work on the gently sloping plain as well as on its steeper borders and the countless little "earth glaciers" are gradually transporting much material down hill. Ek collected a fern at a point 250 feet above the sea near where I got my little willows. Ferns are rare.

The roofing job was advanced somewhat to-day.

31 July. Monday.

Low stratus clouds followed by cloudless skies till late in the evening. A beautiful day.

Calm alternating with light (30
variable W. & N.W. winds.

Temp. 8 a. 40°; 12 m. 40°; 4 p. 45°; 8 p. 47°

In the morning went over near the
igloos with Ek to photograph
some "quadrats" (measured square
meters) of poppies and buttercups
and some other subjects. After
luncheon went with Dr. & Ek in
the canoe around the Umanak Butte.

They climbed the talus slope to the
base of the diabase cliff, hoping to
be able to reach a gyr-falcon's
nest which is midway of the cliff
face, while I paddled about in
the canoe waiting for them. They
found their quest too difficult with-
out ropes &c. and came down.

Then we kept on around the
point. The day was long, the

water smooth and the ride (31)
enjoyable. We beached the canoe
in a cove near the tupics and
returned on foot across the ist-
mus to the house, arriving at
4 p.m. It was my day on as cook
and I had been planning to
have boiled ham for dinner, but
it was too late to get that ready and
I fell back on boiling some akpats
(murrels) which, fortunately, Anna-
sok had made ready for cooking.
These birds are not nearly so fine
in flavor as the akputtiks or even
as the puisse. Here the akpats are
called little auk by Peter, whereas
we called the akputtik by that
name.

After dinner Ekk. & Dr. took the
canoe and went far up Wosten-

Sound, the evening being (32)
calm, clear and beautiful. Pe-
ter came in to bring Et a mark-
ing brush and he staid a couple
of hours chatting and eating.
I offered him coffee but heated
up and gave him tea by mistake,
having picked up the wrong kettle!
Then after Peter's departure Captain
Corm came down for a smoke
and chat. The Captain greatly
surprised me by saying that Dr.
Hunt had remarked to him
within a day or two that in
his (H's) opinion I would have
made a better leader of the C.L.E.
than Mac, through being sys-
tematic and methodical. I have
no desire to be in charge in the field
of an arctic expedition, but the

Dr.'s good opinion is pleasing - (33
the more so because I have not
considered ^{him} more than passively friend-
ly to me, if indeed he were that.

about 10 o'clock Ek & Dr. came
in reporting that they had secured
an ugjuk (square flipper seal)
and had towed him in shore
at the tupics. This was their first
catch of the kind and they were glad.
After eating some supper, Ek and I
went over to the ugjuk. He got
Egingwah Bada to skin the animal
and I was interested in watching
the Eskimo, who finished the job
of skinning and cutting up most
skillfully just as the "Ingerlis" came
to anchor in the cove and sent
her boat ashore at midnight
under the light of a clear sun.

We had observed the power- (34)
boat working her way out from
in front of Peter's house around
the ~~west~~ east side of the bay and
Ek had hurried in order to get
the seal cut up before the boat
should arrive, so that he might
divide the meat according to
his own ideas and not accord-
ing to the Eskimo custom, which
accords certain parts to those
who help skin and cut up.
Egingwah entered into Ek's wish
and the way he hurried was
surprising, as was also the skill
with which he severed the joints
with his knife.

Shortly after midnight the "In-
gerlis" left for the Cany Islands with
Peter & Koch.

Beautiful night.

1 August. Tuesday.

(35)

Scattered cirrus clouds and very light S.W. wind at 8 a.m., but clouded over and S. wind was chilly by noon. Thick in afternoon and moderate, chilly wind from north in afternoon, but calm after about 4 o'clock. ^{rather} Showed ~~thickly~~ from 6 to 6:30 & more later.

Temp. 8 a. 41°; 12 m. 38°; 4 p. 35½°; 8 p. 35½°

August has arrived with the old ice still blocking and practically filling the bay in front of the houses, which is the true North Star Bay. No steamer yet and we are waiting, only waiting. Photo'd our sleeping tent and adjusted scale on graphic camera. Did a little work on the "Chitt Voyages". Called on Rasmussen for nearly an hour in the afternoon. All the Eskimos except Egingwah bade are away today. Hendrik, Tobias and two others were up

with Peter & Koch to the Cavy Is., while (36) the rest went up Wostenholme Sound after the narwhals which Ek & Dr saw last evening. The roofing job has been deserted, three-quarters done, and tools and lumber dropped where last held.

2 August. Wednesday.

Heavily overcast and thick. Strong easterly gale (7-8) began to blow about 4 a.m. and raged with but little moderation all day. The spume was flying thickly off and beyond Petovik Point, which is at the mouth of the valley down which we came from the ice cap.

Temp. 8a. $36\frac{1}{2}^{\circ}$; 12m. $38\frac{1}{2}^{\circ}$; 4p. $38\frac{1}{2}^{\circ}$; 8p. $37\frac{1}{2}^{\circ}$

Egingwah and the others who went after narwhals returned last night, having had no success.

This has been a stormy, disagreeable

chilly day, though we have had no rain or snow yet (7:15p.) (37)

The ice really went out of North Star Bay this afternoon, disappearing around the Umanak Butte about 5 o'clock. My guess is that Parker Snow Bay has cleared out to-day too under the influence of this wind and the high tides, and that the "Cluett" has sailed also unless the wind has been too strong for her to start. Most of the others, perhaps all of them, think that she got out some days ago.

Acting on a suggestion made by Ek, who is cook today, I went over to the other house and brought Rasmussen back to dine with us. We had boiled uqsuk (square flipper seal; orsoq is the word for blubber or oil), baked beans,

cranberry sauce, boiled rice (38
with raisins, pilot bread, coffee,
butter and milk - a good dinner;

followed by cigars and music.

Our Egingwah and Imahsok were at
dinner of course and they and E-
gingwah badu and Aqadlungwah
came ⁱⁿ ~~in~~ ^{to} listen to the music.

Rasmussen speaks highly of Peary's
work in the Arctic and his influence
over the Smith Sound Eskimos.
He taught the people many use-
ful things, gave them good fire
arms and many utensils and
started them on the road to pros-
perity. R. says that no one famil-
iar with conditions in the Far
North would criticise Peary for
his announcement of "Peary Chan-
nel" and "Crocker Land".

3 August. Thursday.

(39)

Cloudy. Many banks of heavy cloud.

High E. wind continued till latter part of afternoon. Late afternoon, ^{sky} became wholly overcast. Breezed up again in evening.

Temp. 8 a. 41°; 12 m. 44°; 4 p. 43°; 8 p. 43°

Ek & I slept in the house last night on account of the gale.

In morning Ek and I went over to upper part of sloping plain at base of cliffs N.E. of Peter's house, from where I took photos, both w. a. & 6½" lens, of the bay in its freedom ^{Told Ek that I would set him up to dinner after our return} from ice. ^{if the "Cluett" left P.S.B. before 2. VIII}

After luncheon did something on "Cluett Voyage" and then went over to Rasmussen's to give him the letter which I wrote last evening. There I had some fried narwhal steak. Delicious, tasting much like beef.

The ice is coming out of the fjord (40
in a great stream which included
much ice from the glaciers, but it is
veering off to the farther side of the Sound.
Repairing roof continued this evening.

4 August. Friday.

The wind, which moderated greatly
yesterday afternoon, increased again
during the evening and night
but Elc & I slept in the tent with-
out untoward incident. To-day
the sky has been overcast and
the easterly wind has been strong
(4-5+6). Disagreeable. ^{Bitter 6+7h. m.} Wind was ^{*8-9+}
gusty.

Temp. 8a. 43° ; 12m. 43° ; 4p. 41° ; 8p. 42° .

This morning two female eider ducks
followed by a ~~train~~ of nine young
all in close order swam past our
windows, forming a pretty
picture.

Captain Comer keeps on digging away at his bank of débris, in spite of the disagreeable weather. The absence of direct sunlight too hampers him through consequent slow melting of the mass.

End of our own coal to-day, and we must again attack Peter's little pile of poorer coal tomorrow. When the "Ingerlis" gets back from ~~Park~~ Casey Islands she will, we hope, go over to Parker Snow Bay for some of the coal which I landed there for Peter.

Interviewed Rasmussen again this afternoon regarding getting home and again I understand that we can depend upon the "Kap York" if our own steamer does not come and upon the "Ingerlis", if neither our boat

nor the "Kap York" comes. The 142 question whether the "K.Y." could take us and our goods as far as St. Johns or, if need be, Halifax must be left for decision until after the arrival of the vessel here. The "Ingerlis" could take us alone as far as Egedesminde or Holstensborg, whence the "Hans Egede" would take us on to Copenhagen. Rasmussen Peter & Koch came over after dinner.

The gusty gale has driven hundreds or thousands of little aukks (doreckies) over into this bay this afternoon and evening.

Too windy for our tent to-night.

5 August. Saturday.

Overcast. Thick outside. S. E. gale severe (7-9) last night and continues this morning. Wind moderated for a time in afternoon and soon shore for a few minutes then the stormy wind began again.

Temp. 8 a. 40°; 12 m. 41°; 4 p. 43°; 8 p. 41°

Last night Et took his threatened bath and shave and this morning put on clean clothing, in anticipation of the arrival of our steamer, this being "his" "day" for her to come. He says that if he does not come to-day, no one can blame him hereafter, if he is not spruced up when she does come. He looks fine in new shirt and trousers of gray woolen and high field boots. 10:30 P.M.

The ship has not come -

Had long talk with Rasmussen this evening regarding possible use by us of "Kap York" or "Ingeris". Of course our use of either will remove it from his use, but he wishes to be of the utmost use to the Expedition and the Museum and will forego his convenience in the

matter, and will do so gladly, 144 without profit above expenses if he can regard the Expedition as a scientific enterprise without commercial bias, i.e., if we are not business competitors with him in this limited field. I assured him that it had not been the intention or desire of the Expedition to establish a trading station up here to compete with him.

6 August. Sunday.

Gale was at its height last night, but died down to S.E. $2-3$ by 8 a.m. Overcast, but sun broke through about 10:30 and day became pleasant though not clear. Wind of variable strength. Warm. Temp. 8a. $47\frac{1}{2}^{\circ}$; 12m. 52° ; 4p. $53\frac{1}{2}^{\circ}$; 8p.

"Ingerlis" was brought around (45° into this bay this afternoon. Her new sheathing was partly torn off by the sea on the Cary Is. trip.

7 August. Monday.

C 1. S 2 at 8 a. but becoming N 2 by 9 a. and S again in afternoon. Beautiful day & cloudless evening.

Temp. 8 a. $44\frac{1}{2}^{\circ}$; 12 m. $44\frac{1}{2}^{\circ}$; 4 p. 40° ; 8 p. 41°

Roof actually finished this evening, aside from painting. Rasmussen and Peter plus several Eskimos went out Narwhal hunting. They took Dr. with them and I went around in the "Ingerlis" from Thule to the tupics at Umanak. It was a pleasant sail under a cloudless sky, but rather cool. I saw the glint of the ice crystals forming close to the sun.

of the water. Left Thule at 9:50 a. 146
and reached tupsics $\frac{3}{4}$ hr. later. The
boat went up the fjord (Wosten-
holme Sound)

8 August. Tuesday.

C 1 + calm at 8 a, S.E. 2 at 9 a.

N.2 at noon. Calm from mid afternoon on.

Temp. 8 a. 44° ; 12 m. 42° ; 4 p. 42° ; 8 p. $44\frac{1}{2}^{\circ}$

Dr. returned to house at 7 a.m.

They saw no narwhal, but the Eskimos got 5 ptuisse.

Captain Comer moved over into one of the igloos Sunday night for sleeping quarters. Seems to be an invitation to his abnegation to return! He would in all probability be induced enough, had he been asked to make the change, but it is his own plan.

Directly after luncheon, Ek, Dr. & I (47)

I started for the top of Umanak Butte.

Dr. turned back at the base of the vertical cliff of diabase, his rubber shoes being too large for him and wholly unsuitable for attempting the scramble up the 60-foot bluff. It was some climb for Ek and me, but our kamiks enabled us to gain and keep good footholds in the crevices between the rocks both going up and coming down. The weather was perfect for the excursion. By my aneroid the base of the cliff was 600' A. S., top 660' A. S., highest part of plateau 710' A. S. In the western part of the plateau there is a small cairn. The western cliffs are vertical and present sheer bluffs that must be 100' high or more. We saw plenty of bergs and some pan ice in

the near and far distance but (48)
there seemed to be much open water.

About 8 p.m. the "Ingerlis" started
out toward Cape Attrol with Rossmu-
sen, Dr. Hunt and Eskimos
going after little auk's (akk putti-
atos), grass for kamiks and wal-
rus. Peter and Kock came
over here after the boat left.

9 August. Wednesday.

Cloudy. Thick fog from mid after-
noon on. Wind, N 1-2 at 8a; S 1 at 10a. Variable
chilly after the fog became ice. Wind seem-
ed to come more from W or W. by N. and swing in
around the Umanatak so as to seem to come fr. S.W.
Temp. 8a. 44° ; 12m. 41° ; 4p. 39°

Ek went to the top of the Umanatak again di-
rectly after breakfast this morning and
recovered my note book which had dropped

from my pocket. Fortunate not to lose (49)
it altogether.

Wrote up yesterdays notes and cared
for specimens.

10 August. Thursday.

Clear in early morning but cloudy
at 8 o'clock and thick fog came
in or settled down by 9:30. The
fog lessened by 11 o'clock and dis-
appeared after noon. Wind at
8 a. S.W. 1-2 but N.E. 2 at noon
and light variable after noon. Calm
evening.

Temp. 8 a. $36\frac{1}{2}^{\circ}$; 12 m. 34° ; 4 p. $37\frac{1}{2}^{\circ}$; 8 p. 35° .

Ice formed last night in fair
beside house door. Autumn
has begun in earnest. Eck & Koch
have gone up the fjord in canoe this
evening - No ship yet!

11 August. Friday.

(50)

Overcast and calm at 8 a. Began snowing lightly at 9 a., but stopped before 11 a. Cleared off beautifully betw. 2 & 3 p. m. Light puffs of wind occasionally in afternoon from S and S. W.

Temp. 8 a. $37\frac{1}{2}^{\circ}$; 12 m. $38\frac{1}{2}^{\circ}$; 4 p. $36\frac{1}{2}^{\circ}$; 8 p. $35\frac{1}{2}^{\circ}$

My day on as cook. Out in canoe with Eek + Innahsok after water from brook. In early afternoon went over to tups and photographed Wostenholme Sound to show thickness of assemblage of bogs and fragments and pans of ice.

Splitting of bogs makes noise like rifle shot. Later went out in canoe with Eek + Innahsok, going across bay to cliffs on south side where we collected specimens of calcite and aragonite(?) seams from the shaly beds of the Huronian some hundreds of feet below the diabase cap.

Captain Corner seems sour or (51) angry over something, but I cannot discover the cause. He is more taciturn to-day than he was even yesterday. He spends all the time away from the house that he possibly can find an excuse for, or without any excuse. He has taken books etc over to the igloo near the bank where he is digging. Last evening he hurried through dinner and went upstairs. As soon as I had finished, I called to him to come down and have a "puma"; but he declined on the score of being busy. Within ten minutes he was out of the house, headed for the igloo. To-day it has taken persistent effort on my part to get any conversation out of him. Ek is not conscious of offending him in any way recently, but nothing that Ek does is right in the Captain's eyes, I am sorry to note.

12 August. Saturday. 152

Heavily cloudy all day. Few flakes of snow falling at 5 p.m. and later. Calm morning but chilly. S.E. wind sprang up in latter part of afternoon and was blowing rather freshly ($\frac{3}{4}$ 3) at 6 p.m. Temp. 8 a. 33°; 12 m. 35°; 4 p. 37°; 8 p. $36\frac{1}{2}$ °

Beautifully clear during most of night but dense fog came in in the early morning. Was very thick when "Dr. Gerlis" came into Hendrik's Harbor about 3 this morning. The hunting trip was not highly successful, the party getting only one walrus, one uqsuk, several ptarmigan and some akpats. Evik netted 80 of the last.

On last night's high tide countless fragments of ice came into the head of the bay, lots of which were left along shore by the receding tide.

Some little bergs came in too (53) and grounded. This glacial ice makes the water question easy for us once more. Some of the ice is as clear as crystal and is evidently frozen fresh water, not consolidated snow.

Yesterday Captain Comes unearthed near the base of his diggings a fragment of white agate. This is used by the women for cutting the navel cord of a new-born child. Quite a find. No agate occurs in this immediate vicinity, but I understand that it is found at McCormick Bay. I spent most of the morning at and near the diggings, and the Captain was cheerful enough, though I still fear that something is on his mind.

13 August. Sunday. (54)

High S.E. wind (6-8) all night and until after 9 o'clock this morning. Then began to moderate somewhat. Thickly cloudy till after 10 a.m., but almost cloudless by 11 a.m. and day became beautiful. Very light N. wind about noon. Ice driven out from bay and clear all the way to Cape Athol. Temp. 8 a. 38 $\frac{1}{2}$ $^{\circ}$; 12 m. 41 $^{\circ}$

Had a bad night in the tent on account of the wind. I got very little sleep, but Ek slept all night till about 5:15 this morning. The wind was so strong that the tent began to tear and we let it down upon us. At 5:30 we got up pulled the tent and took our sleeping rigs into the house end of the tent, I presume.

Dr. had some kind of chills last night and is not feeling well to-day. Rasmussen was here for breakfast and we talked over details of Ingeris' trip to Etah which he and I are to begin on Tuesday noon, if the ship does not arrive before then. Meanwhile he is going to make a reconnoitering journey to some mountains on the ice cap southeast of here, whence he can get a view of Melville Bay and form some idea of conditions there.

14 August. Monday.

C. Wind S.E. 3, increasing to 8±. Gusty all day. Seems ^{more} stormy outside.
Temp. 8a. $45\frac{1}{2}^{\circ}$; 12m. $44\frac{1}{2}^{\circ}$; 4p. 50° ; 8p. $46\frac{1}{2}^{\circ}$

Rasmussen gave up his trip on to the ice cap, on account of the thick,

stormy weather and decided to (56)
start "early" tomorrow morning
for Etah, if storm should cease.
I spent day getting ready for Etah &
putting my belongings into shape
for transportation if the ship should
come in my absence.

15 August. Tuesday.

Clear & almost cloudless. Calm.

Temp. N.S.B. 8a. $46\frac{1}{2}^{\circ}$; 12m. $45\frac{1}{2}^{\circ}$; 4p. 42° ; 8p. $40\frac{1}{2}^{\circ}$

w.r.r. E.

at 11:52 a.m. left on "Inger Lis" for
Etah in company with Rasmussen, Peter,
Comer & Hendrik. Returning, arrived
Thule at 10 a.m. on the 20th. For diary
see "Greenland Journal V" pp. 5-27.
Mr. Rasmussen and his people rested
all that day. Peter, who began to feel
ill at Etah or the day before our arri-
val there, was sick with the gripper.

when and staid in his bunk all (57) the way home. His temperature was 104 when Dr. H. examined him here.

21 August. Monday.

A. m. slightly hazy. Calm. P. m. overcast, followed by rain in the evening.

Temp. 8 a. $37\frac{1}{2}^{\circ}$; 12 m. 41° ; 4 p. 44° ; 8 p. $45\frac{1}{2}^{\circ}$

This morning the bay was covered with a continuous layer of thin young ice which did not disappear till noon.

Unloaded our oil and food from the "Fraser Lis".

Conferences with Mr. Rasmussen regarding our recent visit at Etah and the proposed motor boat trip to South Greenland. He evidently doubts Macmillan's veracity and regards the outlook for the latter as being very unfavorable on account of probable ice con-

ditions in Melville Bay as indicated [58] by the conditions in this region and the long prevalence of southerly winds. In the many conferences with my own party constant differences of opinion arise as to plans for the outward journey on the "Inger Lis". Ekblaw wants a written promise from Captain Comer that the boat will surely take a course close to shore all the way around the bay and not declare that he too will not go unless the captain promises to follow that route. When I, accordingly, tried to get from Captain Comer an exact statement of his plans, he said that, while he had no intention of going out to sea in the power boat, he would have to be left free to exercise his own judgment as to what was best to be done under the condi-

tions as they developed. He was (59)
much incensed at the suggestion that
he give a written promise to fol-
low any particular route - 'a
ship's Captain was not going to be
dictated to by a lot of land lubbers'.
If the men did not have confidence in
his judgment, put some one else
in charge and he would go in private
capacity? I did not sympathize
with his unwillingness to give a
written statement, but I was
satisfied with his intention to
follow the shore line route and I
am continuing the making of
arrangements for the use of the
boat.

— Mr. Rasmussen writes me that
ice conditions are so bad that the
"Dungeness" would probably be con-

siderably injured by the south- (60)
ward journey and that therefore the mu-
seum must buy the boat, if I decide
to go southward in her. Furthermore,
Hendrik is not willing to go under
the ice conditions now developing.
I should be willing to buy the boat
for the use of our party, if Hendrik would
stick to his post - but not otherwise,
I fear!

22. August. Tuesday.

C 2 + low haze. Calm. Clear and
calm in the evening, almost no clouds.

Temp. 8a. $44\frac{1}{2}^{\circ}$; 12m. $44\frac{1}{2}^{\circ}$; 4p. $44\frac{1}{2}$; 8p. 44°

Finished and delivered letter to Mr.
Rasmussen, discussing foxskin question
and finally offering him without
recompense all the skins in possession
of Expedition above ~~fixty~~ the lot collected.

ed for strictly scientific purposes (6),
by Dr. Tanquary and fifty to be se-
lected to show variations from the
lot assembled by Mac Millan.

Mr. Rasmussen tells me that Mac
told Peter [when crossing Melville Bay⁽¹⁾
in 1915] that the Expedition then had
350 skins in its possession and that
Peter overhauled with Mac at Etah
something like this number. What
can R. therefore think of Mac's
statement to us (R. & me) at Etah
last Thursday that "there never had
been more than 200 foxskins in
the possession of the Expedition at
one time"? I told R. that I guessed
that Mac was bragging when he
talked to Peter. Mr. Rasmussen
says furthermore that he has heard
that Mac ~~told~~ instructed for

to send all the foxskins to his (62)
(Mac's) sister at Freeport, Maine.

Unfortunately, Mac did this very
thing, as I know now from having
seen on Sunday last (the 20th)
the letter of instructions dated
11 Feb., 1914, which Mac gave to
Jot Small when the first start
for Crocker Land was made
in which he (Mac) wrote "The
fox skins are all to go to Freeport,"
a direction which was not recalled
or rescinded when the second start
was made and Dr. Hunt was
left in general charge of head-
quarters. Mr. Rasmussen ^{argues} ~~claims~~,
with apparent correctness, that this
negatives Mac Millan's statement
made to us on the 17th that the fox
skins were collected for the

scientific purposes of the 163
Museum to illustrate varieties and

* Note. Mac's action regarding the disposition of the foxskins was a ~~an~~ indirect violation of his contract with the Museum, but he did not retreat from his position with reference to the material, until some time after his return from Crocker Land, when the other members of the staff showed him the falsity of his attitude and its injustice to them.

gradations between the blue & the white.

— At about 3 o'clock this afternoon K. R. started in the "Inger Lis", taking his karmatik and dogs for a trip up onto the ice cap via Petowitc Glacier to inspect or gain an idea of the condition of the ice. Ekblaw and Hunt went with him for the boat trip.

23 August. Wednesday.

(64)

Overcast. Calm or S.W. 1 at 8 o'clock and through morning, but sky cleared in afternoon and about 3 o'clock heavy S.E. wind (6-7) began to blow. K.R. returned this morning without having reached the glacier. He went to the top of the cliffs near Cape Athol and concluded that ice conditions in Melville Bay were most probably very bad. So too most emphatically Agako ("Pingasut") and Egingwah badu, while Ek felt much the same way though Dr (who had not gone up so high on the cliffs) thought differently. The southerly winds that have prevailed so long and heavily this summer and particularly during the past month have certainly packed the ice against the

shore of Melville Bay to such an ⁽⁶⁵⁾ extent that the motor boat could not get through and the attempt would be fraught with undue danger, in the opinion of Mr. Rasmussen and the Eskimos.

This evening Mr. Koch brought over a letter in Danish in which Mr. Rasmussen confirmed the foregoing report and stated that Hendrik refused to go south with us in the "Inger Lis" on account of ice conditions being so bad. This settles this matter for us, undoubtedly, since it would not be wise to buy the boat and take the trip on our own responsibility, ~~with~~ without having Hendrik along to serve as engineer. Small has said that he would not undertake the

task of running the engine (66 alone, in view of his almost total unfamiliarity with it.

Egingwah made a new pipe stem for me out of a piece of walrus ivory.

24 August. Thursday.

Overcast. High S.E. wind (7-8) continued all last night, to-day and until midnight.

Temp. 8a. 42° ; 12m. $44\frac{1}{2}^{\circ}$; 4p. 43° ; 8p. 42°

Peter is very ill with the grippe. At Etah he was miserable, the attack having begun apparently the day before our arrival, and he staid in his bunk all the way back to N.S.B.

He has eaten practically nothing for a week and his temperature has been from 102 to 103.5 or 104 the whole time.

Seven of the Eskimos and Jot small went across the fiord on

Tuesday morning in the "Inger Lis" (67)
to hunt narwhals and seals, ex-
pecting to return to-day, but the wind
is too high to make it advisable for
the motorboat to go after them.

25 August. Friday.

Morning wholly overcast. Light
(1-2) S.W. wind. Fine afternoon and
evening, though somewhat hazy.
Very light N. wind (1) at 11 p.m.

Temp. 8 a. 35°; 12 m. $36\frac{1}{2}$ °; 4 p. ?; 11 p. 35°
got ~~came~~ back last night by canoe ^{this} a.m.
Out all afternoon and until late this
evening with K. R., Ek and Eskimos,
visiting hunting camp on north side
of fjord and taking Lange Koch to
the head of the fjord. We left him ^{+ an esk. boy} at
a fine old igloo there on a low point
of Archean gneiss. He is going to spend
several days making map and

studying geology of the district. (68)
Then we returned to the hunting camp
loaded up with meat and three kayak-
acks and came home. The party
was very successful, the first day
getting five narwhal, 21 pruisse and
one uqsuk. Egingwah suah got
six more pruisse to-day. We are
on Easy Street again and there are
fifteen caches of meat left at the
camp site. I was interested in
seeing the camp and the way the
natives dispose of the catch. There
is ~~is~~ much good natured play a-
mong both men and women, sep-
arately and together. Egingwah
badu, who came across to camp to-
day in his kayak, is a great joker.
He remarked to the crowd on the
boat, he being alongside in his kayak,

that he liked to joke with me but (69)
that he hated to ask me for any tobacco.
Just then, without knowing what
he had said, I gave him what I had
left in a package and a great laugh
went up, which I did not under-
stand till K. R. explained. Then
Egingwah said that I was an angitok
and had read his thoughts. My
name here is Doctor Saviksuh
- or big iron, material from which
knives are made. They don't make
the "h" sound so Horey becomes
Savi = Savik and the "suh" is
a token of respect. E.g. Etsuhah, Doc-
tor suah (for Dr. Hunt). Comisuhah for
Captain Comer - but "comi" is "louse",
hence he is the big louse

Bergs were frequently cracking
with great noise. On our way back

I saw a small one break in two ~~to~~
through pressure from below - flotation.

We could not come into North
26 August. Saturday. Star Bay
on account of pan ice that had
drifted in between the Umanak
and Petrowik during our absence,
and we had to put back to Hendrik's
Harbor near the tupsics.

26 August. Saturday.

Temp. 8 a. 36 $\frac{1}{2}$; 12 m. 41 $^{\circ}$; 4 p. 38 $\frac{1}{2}$ $^{\circ}$; 8 p. 39 $^{\circ}$.

Clear morning, with light low haze
in distance. Calm all day. Sky over-
cast in afternoon and evening.
Bay covered with young ice in the
morning, which persisted all day,
but melted away in the cloudy evening.
Pack ice in outer bay, which moved
in considerably in afternoon.

Devoted morning, 9 to 12, to a conference with Ekblaw, Hunt, Small and Corner regarding prospects and plans, two letters from K. R. having been received about 9 o'clock. We decided that, in view of Mr. Rasmussen's advice and Hendrik's refusal to act as engineer, it was not wise to borrow or buy the "Inger Lis" and start for Upernivik. Small said that he would not undertake the responsibility of the engine under such conditions. I stated that Dr. Hunt had been offered ~~to~~ an opportunity to go southward on the "Cluett" this season which had accepted at first and then declined, but that Ekblaw had not had this chance. Small said that Macmillan had not given him

the opportunity, but that he did 62
not expect it, because last Septem-
ber he had agreed to stay north another
year. I said that the Museum was
under obligation to furnish Ekblaw
with transportation southward this
winter, by reason of promises made
to him last fall when he relinquished
his right to go southward in ^{sledge} the party
that I was then organizing. I then
stated that the Museum would pro-
vide means for Ekblaw, Small and
Hunt or for Ekblaw and Hunt
to go out by sledge during the com-
ing winter, in case no ship comes
the present season.

This afternoon Jot told me
that he would stay at Etah with
me this winter, if I wanted him
to do so.

I am to refrain from making any arrangements for going out this winter, even if I decide to make the trip, until after arrangements have been concluded for the other men.

This afternoon Jot started up the fjord in his canoe with our Egingiak in his kayak on a hunting trip.

Rasmussen very anxious about Peter.

27 August. Sunday.

Temp. 8a. $44\frac{1}{2}^{\circ}$; 12m. $38\frac{1}{2}^{\circ}$; 4p. $41\frac{1}{2}^{\circ}$

Morning overcast. Sun broke through clouds for a few minutes at midday. Flat calm continues. Not much young ice in bay, but considerable pan ice there and outside.

Peter seems a little better, retains a very little nourishment. Temperature

however 102-103°. and yesterday (24) the doctor (Hunt) stated that he had some inflammation of the lungs, endocarditis and distinct heart murmur, but these factors are no worse to-day.

28 August. Monday.

Temp. 8 a. $36\frac{1}{2}^{\circ}$; 12 m. 41° ; 4 p. 41°

Cloudy morning but sun came out about noon. Calm here, but apparently the northerly wind still holds outside.

Wrote letter to Ekblaw authorizing him to begin preparations, subject to my approval, for his going out by sledge next winter in case of non arrival of ship this season; also one to Dr. Hunt offering him the opportunity of going out by sledge with EK, & under his care and orders.

Lovely day and open ice for the

ship to come in - but she does (75)
not appear!

Left about 4:40 p.m. on "Finger Lis" with
K.R., Hendrik, Ajako (Pingasut) and
Bozeman for Saunders Island for seal
and to hunt walrus between there
and Dalrymple Rock.

Full notes are in pocket notebook
for next two days. Beautiful weather.
Cloudless or nearly so, and calm or
light variable winds from west & north.
Spent first night in "Kund's Harbor" at
west (or northwest) corner of Saunders
Island, close to the wonderful bird cliffs
which still are densely populated with
males, females and young. The
males have gone south. Many
herring gulls and a few fulgomasters.
Wednesday morning we motored
out through open ice to Eider Duck

and spent about seven hours (76) there in lovely warm sunshine looking for walruses and waiting for tide to open ice up again. Wilderness of densely packed ice outside Cape Athol, Wostenholme Island and Dalrymple Rock as far as we can see & 60 ft up on Saunders Is. and top of Eider Duck Is., wh. is about 60 ft above the sea. Lots of duck nests. Many females and young flying and swimming about. Agate and Bozman started out about 4 p. m.

After a walrus and an hour later K.P. christened our boat "Dr. Horace's Harbor": we started after them. Could not find them and finally, after two hours search, tied up behind Dalrymple Rock. Driven out by the ice about 10:15. Succeeded in working way be-
tween cakes, going toward Eider Duck,

Island and then toward Wosser - (77)
holme. K. R. + Hendrik evidently
were worried about the two boys,
while I with less knowledge of conditions
was extremely anxious. About 1 a.-
m. of Wednesday we had worked our
way through to clearer water near
Saunders Island and K. R. roused
me from my bunk with news
that the Kyackes were coming
toward us. All were greatly relieved.
Walrus had led them a long chase,
but they finally killed him and
moored him to a berg. Taking
on the boys and getting the walrus,
wh. was 2 mi ± N. we went to
Kundi's Harbor, beached the car-
cass, boiled some of his heart
had luncheon and turned
in. Spent day at Kundi's Har-

bo. Cut up walrus, wh. was $10\frac{1}{2}$ ft (70)
from tip to tip, loaded meat into long-
boat and started for Umanak about
6:30 p.m. Lovely day and beautiful
calm evening. Reached tupsics
at Umanak, through much young
ice last of way, about 11:10. Found
Ahnquodablaho's wife there. She
and the old man had arrived via
ice cap from Cape York Tuesday
morning. He was now up the
fiord here hunting with Et, Dr
and Egingwah bairn. Melville
Bay jammed full of ice and shores
impassable for any kind of boat.
Rasmussen was correct in his
diagnosis from Cape Athol!

Question now is, when can the
ship coarsse? Rasmussen is
hopeful, though getting dubious.

31 August. Thursday.

(79)

Temp. 8 a. 35 $\frac{1}{2}$ °; 12 m. 34°; 4 p. 34°; 8 p. 30 $\frac{1}{2}$ °

Clear, cloudless, calm. Occasional N.W. wind, as at noon.

Eks Dr., who went up the fjord with Ahnguodablahe yesterday afternoon, returned about 3 p. m. Koch also came back, having ^{had} a fine time; geologizing and mapping. Saw the Moltke glacier calve five bergs, all of which separated from top down ward. Eks Dr. helped on two narwhal. Jot came back Tuesday, having gotten five grissle.

Evening. Mr. Rasmussen is discouraged now over ice conditions and the great thickening amount of young ice forming in this calm spell. Dubious about "Kap York". Thinks we had better go to Etah earlier.

say 4th or 5th, leaving orders for "Kap York" (80)
"York" to follow. Promises that "Kap York"
shall go to Etah, no matter when she
comes, if at all practicable.

1 September. Friday.

Temp. 8a. $29\frac{1}{2}^{\circ}$; 12m. 30° ; 4p. $29\frac{1}{2}^{\circ}$; 8p. 30°

Overcast with ^{thick} fog wh. hangs about 200
feet above the sea. Calm. The young
ice is about $\frac{3}{4}$ " thick and the coating of
snow that drizzled down at noon
gives things a decidedly wintry aspect.
Fog lifted about 7p.m. and we could see out beyond
Cape but no ship. Sky overcast & leaden-
a dismal day. Blue enough. Mr Rasmussen
seen now sets dawning of 5th as time to
start to Etah. I hate to think of leaving
here again for the North in the "Inger His"; it
seems like giving up the ship, though Cap-
tain Comer says that he shall hope and ex-
pect until 5 October

2 September. Saturday (81)

Temp. 8 a. 34°; 12 m. 34°; 4 p. 34°; 8 p. 31°

Overcast. Calm. About 9 o'clock fog settled down on the cape region.

This morning in the course of general conversation Job said that Mene said that there were nine boxes of foxskins left in Job's care when Mac started for Crocker Land i.e. Mene counted them then and reported to Job. Dr. remarked that Tongwi said ^{to Job} that he (Tongwi) had let Mac have his foxskins this spring (1916), i.e. Peter reported that Tongwi owed the station furs & and did not pay them because they had been sold to Mac.

Noon - a little spitting snow. Clearer later but still wholly overcast.

Told Mr. Rasmussen this afternoon, that I did not wish to charge him

anything for the gasoline that he (82)
might take. He replied that he
did not wish to take it for nothing.

Ajako (Pingasut) has begun digging
out a place in which to build his
igloo. Hard work in the frozen ground.
Beside him, Erik, Egingashukah
and Inuititok (Harrigan) are to live
in the igloos near where Captain Conner
has been digging and Ajobosoluk's
igloo is a little further east. I un-
derstand that Egingashukah is
to live at ^{Hendrick's house} the station ("igloo suahui",
Ajako says) with K. R. and Tobias.

3 September. Sunday.

Temp. 8a. 31° ; 12m. 32° ; 4p. 31° ; 8p. 30°

Overcast and thick, foggy in latter part
calm
of day. Fine granular snow has fallen
gently all day, and even the surface

of the flat is whitened this evening. (83)
It has been a dull, dull day and we
feel correspondingly blue, though Cap-
tain Corcoran keeps a stiff upper lip
and says "Don't give up the ship" + "She
'll be here before long - just a few days now".
He thinks that the "Cluett" is out all right,
but Rasmussen and Koch, who was
here at dinner (6 p.m.), think that she
is in the ice and are thankful that I
am not on her. So too am I, if this
cruise is correct.
Peter has developed a little pleurisy.

4 September. Monday.

Temp. 8 a.m. 33° ; 12 m. 34° ; 4 p. $28\frac{1}{2}^{\circ}$; 8 p. 25°

Overcast, but clearing toward noon. Calm.
Sun breaking through clouds between
12 + 2 p.m., but fog came in thickly
about 3 o'clock. Very light southerly
wind about 4 o'clock.

Peter is better again to-day. Saw (84) him for a while this afternoon; looks better and more like himself than at any time since 17 August at Etah. This ~~about~~ 8 p.m. afternoon I got 500 Kroner from Mr. Rasmussen for possible use at Etah this winter if we stay.

["] About 8 p.m. the motorboat came in from Bear Saunders Is with injured propeller. Does not look as if we should get away tomorrow for Etah. The hunters got one walrus only, but a big one.

5 September Tuesday

Temp. 8 a. 25 $\frac{1}{2}$ $^{\circ}$; 12 m. 29 $\frac{1}{2}$ $^{\circ}$; 4 p. 29 $\frac{1}{2}$ $^{\circ}$; 8 p.

Clear, cloudless, calm. Beautiful day. Engine repaired this morning with Jot's help and boat went up fjord on trial trip this afternoon.

Started off all right. We are (85)
now to start at 6 a.m. tomorrow.
Seals on new ice in North Star Bay.

6 September. Wednesday.

Clear, cloudless, calm. Temp. 8 a. 30°

Loaded most of baggage last night, sending it over by Kamatik from the house to the point beyond the tupics, where the "Inger Lis" lay on account of the young ice in North Star Bay itself. Sent sleeping bags and last of other baggage over this morning and left house about 8 a.m. Got under way at 9:07 with Rasmussen, Koch, Ekblaw, Small, Comer, Heaney, Hendrik, Tobias and Egingwah suah on board. Ek is coming back and going to live with Egingwah bahu. Dr. remained behind is going to live at Peter's. Rasmussen and Koch are going to live in "our" (Hendrik's) house.

with Egingwah and Inuahso. (86)
Day was beautiful and we encountered no obstructing ice. Plenty of bergs but well spread apart. At about 5 p.m. we were off Cape Parry and at 7:50 p.m. we reached Mechi-livik, where we left Egingwah and took on Toluitingwah as fog pilot. Fine snow had been falling during latter part of afternoon and the hill-sides were already whitened. Went ashore and visited with Kolutinguat's family. His wife Tungwi (same name as that of the man at Ulugset), called Tungwingash by Parry, is a fine looking motherly woman. Her daughter Alnadauh is Kudlukto's wife. Two white whales swam along the shore passing close to the boat, while we were on shore. Left tupsic at 8:30

but did not get under way until (87)
9:20 on account of having to fix engine.
About three hours later we called at
Ulugsset, but I was asleep and did not
know it.

7 September. Thursday.

Thick. Snowing. Calm or nearly so.

6a. off Nerkre; 7:30 off Peteravik;
9:15 Sarfalek (Silwadi); 11:25 Cape
Alexander; 1:45 Etah, and dropped
anchor in front of house. We picked
up at Wireless Island several Eskimos,
who were out there caching Expedition
walrus skins. Mac did not seem
much surprised to see us. Said that
the prevalence of the south wind through
out August made him feel sure that
we could not go out in the "Inger Dis"
and that a relief ship would be very late.

— Etah —

(88)

if one came at all.

Landed on stuff at once and at high tide "Inger Lis" was run over to a place on the beach where she could be sheathed at low tide. Mac gave me my choice of rooms aside from his. Jot has been in the other front room for three years and has fixed up workbench &c, hence I did not want to disturb him. Eko's room faces southeast and is light and sunny now, but is cold and windy. By Eko's advice as well as Mac's I took Dr. Hunt's old room in the northwest corner as being much the warmest sleeping room in the house. Ni-ni has been living in it, but she is clean and she moved out to a tupic during the day.

Went over foxskin matter again and Mac finally admitted that the first skins which he got were not obtained for "specimens", not being able to deny that he had left instructions with Jot, when he left for Crocker Land in February, 1914, to send them to Freeport. I called Mac's attention to the fact that he had the written instructions applied to all the foxskins. He said that later he realized that this position was untenable, although he had traded for them with his own material [the boys however say that he used expedition stuff too] and that there were not more than 30 or 40 skins then anyhow [this does not seem to agree with Allen's statements of greater number, and he sealed up the boxes]. I wanted to go through the boxes to-day or tomorrow and select the fifty skins that I have proposed to keep for the museum and then turn the remainder over to Mr. Rasmussen, but Mac refuses to have anything more to do with foxskins saying that he has done his level best to get together a fine series of them and now I am upsetting the whole business [See pp. 60-63 of this book]

I do not feel competent to overhance (89) the skins myself and select the best that are to represent the gradations of pelage from blue to white, a feeling that is intensified by to-day's poor light and the number of people about, making our quarters very contracted. Mac says that he is going to turn the foxskins all over to me and have nothing more to do with them.

Mac, Ek and I talked over the question of sending Dr. Hunt out alone this winter, if Ek does not go. Mac strongly recommends his going, if I do not need him. I said that I felt that I had no claim upon him, inasmuch as I had left the "Cleett" contrary to his advice. Jot does not want him here, and Ek says that he would not wish him to stay on his account. I decided therefore to authorize the expenditure of the money needed.

8 September. Friday. Max 30. 2°

Temp. min ^{21.5°} _{18°}; 8a. 25°; 12m. 27°; 4p. 30°; 8p. 28°; 12, 27.5°
Clear, cloudless a.m. N. 1-2. Cloudy by noon.

Jot, Hendrik, Tobias & Kolutingsquash began sheathing "Inger Lis" last night and finished on to-day's low tide by mid afternoon.

Talked further with Rasmussen about foxskins reiterating my position of yesterday and before that I did not like to select skins myself and therefore wished to have zoölogist at Copenhagen or New York Museum pick out the series - remainder to go to Rasmussen. He seemed to appreciate my position in the matter and to be reasonably satisfied with my decision.

my correspondence with K. R. at Thule gives the details of the understanding (90) regarding the fox skins. This afternoon Mr. Rasmussen and I had a talk in Mayak's topic in which it was amicably agreed upon that he had no objection to my securing this coming year such foxskins as the ~~Expedition~~ needs for the kahpetahs still to be made and as may be desired for museum specimens. Any surplus (to be decided upon at the Museum) is to go to Mr. Rasmussen on his own terms, like those now here.

At a conference in the afternoon between Mac, Jot and myself, Jot finally agreed to stay north the coming year, if no ship comes, on the old contract, that he is to be free to go away, hunting ^{monday} &c, occasionally, as he may desire, ("whatever you like", in Mac's words), but he is to cook not less than one-half the time.

Jot said that he would not trust Mac under the old contract but that he would trust and take orders from me. I said of course that such an arrangement would not work, since there could not be two bosses in the house. On account of the expense and our (only) needing him here, I did not wish to send him out by sledge and steamer via South Greenland and Denmark.

Etc had gotten together what he needed ^{from here} for going south; K. R. received some tobacco and three of the larger boxes of dog biscuit here, and at about 8 "Inger his" started from in front of house, where we filled the boat's tanks with 80 gallons of kerosene to replace oil consumed on up-ward trip, gave K. R. 120 gal. kerosene on account (\$9.60) and 5 gal alcohol (\$7.50) and 2 $\frac{1}{2}$ kg tobacco, the last to be replaced on his return from Tasiusak this fall - gave

Kolatingqual a 5 gal. can of kerosene in payment for kamiks & services. We waved (91) good bye to the party about 9 o'clock and returned to the house. At 11 o'clock she was off the house again, having come back for Eki's rifle, which he had forgotten. One of the boys took it out to the "Inger Lis" in his kayak and she was off again, without having stopped her engine. Cape Alexander had its wind cap on but the motor boat went away bravely -

9 September. Saturday. Max 30.2°

Temp. min 24.5°; 8a. 28°; 12m. 26°; 4p. 28°; 8p. 28°; 12, 23°

Overcast. Light to moderate N.E. wind.

Mac turned over to me boxes No. 78, 80, 81, 82, 83, 84, 157 and 158, said by him to contain all the foxskins under his control as leader of the C. L. E. and I gave him a receipt for them.

Mac wants me to write up the "Cluett" relief voyage for insertion in his book. The proposition looks good to me, especially as he would not consider it fair by him for me to publish such an account separately. I presume that he is right too, though I felt somewhat differently last fall.

10 September. Sunday. max 26°. 12, 21°

Temp. min 24°; 8a. 24°; 12m. 25°; 4p. 25°; 8p. 23°

Overcast. N.E. 3-4. Cleared somewhat about 5 p.m. This afternoon the Eskimos, all the men and some of the women started off up the fjord to hunt caribou.

Mac Millan says that he has no objection to my lecturing about the Arctic and my Arctic experiences

Weight, 184½ lbs., in sealskin suit.

11 September. Monday, ^{max 24.3°} _{min 15.8°} (92)
Temp. min 18°; 8a. 20 $\frac{1}{2}$ °; 12m. 24 $\frac{1}{2}$ °; 4p. 22°; 8p. 17 $\frac{1}{2}$; 12, 17.5
C 1. Clear. Wind N.E. 3-4 in morning
Cloudless afternoon with wind N 1-2.
Paritpa brought down a small dead
pod of squid family which Accomodiusah
had gotten on his way up the fjord. Body
is well wounded posteriorly and lateral fins are
only in middle portion of body - alcohol.
Mac yielded to my persistence and took
Eki's boxes away from the coal. He has
provided me with an oil heater for use
in my room.

12 September. Tuesday, ^{max 21 $\frac{1}{2}$ °} _{min 14°} 12, 19.5°
Temp. min 18°; 8a. 18 $\frac{1}{2}$ °; 12m. 20°; 4p. 18 $\frac{1}{2}$ °; 8p. 17 $\frac{1}{2}$ °
Cloudless and clear morning with N.E.
wind 4-6. Wind fully 7 at noon and
continued variably strong all afternoon.
Clouded over about noon. Lots
of wind prevails here at Etah.
"Cluett" rounded Cape Athol a year
ago to-day. Where is this year's relief
ship?

Fall moon last night and tide was very
high. It left a streak of ice along the
maximum height, forming the
beginning of the ice foot.

13 September. Wednesday - max 25° min 18.5°
Temp. min 16°; 8a. 22°; 12m. 23 $\frac{1}{2}$ °; 4p. 23°; 8, 24°; 12, 24.8°
Thick. Snow storm with strong (5-6) N.E.
wind raged all day, ceasing but not clear-
ing in early evening.
Last night's high tide washed out some of
the crib of the motor boat and Mac & Q.C.
went over this morning and fixed it
up, making her safe for the winter, appar-
ently. About noon (high tide) they went

over with the dory and beached that above (93)
the motorboat, turning it bottom up and
securing it for the winter.

14 September. Thursday. Max 31° ; min 19.9°

Temp min 22° ; 8a. $26\frac{1}{2}^{\circ}$; 12m. $28\frac{1}{2}^{\circ}$; 4p. $30\frac{1}{2}^{\circ}$; 8p. $37\frac{1}{2}^{\circ}$; 21.8°
Overcast a.m. N.E. 2-3; noon S.W. 2; 4p. ~~south~~ N.E. 2.
Sunshine afternoon till about 6 o'clock.
Snowed considerably during the night & the land-
scape is wintry to-day. Mac went out in
his kayak and got eleven ducks beyond
Provision Point. Job went out in his and
got a seal. The start up the glacier was made
by the Eskimos today and I heard the dogs
howl - long distance all night. Mac, Cap-
tain Clegg and I had quite a talk on "Cluett"
matters. Mac reports that Etk stated that
Captain Pickels said that I was the one who
stopped the schooner at North Star Bay
last fall, whereas the understanding when
I left on the "Dugout" there was that the
"Cluett" was to follow the motor boat
if he could and I left with him a line
on the a chart drawn by Captain Pickels
under Peter's direction showing the route
that the motor boat would follow to Etk
and back.

15 September. Friday. Max 23° ; min 16.5°

Temp. min $6\frac{1}{2}^{\circ}$; 8a. 21° ; 12m. 23° ; 4p. 20° ; 8p. 20° ; 20.8°
Etk - Wind N. 2-3 all day. Less cloudy in
afternoon and more or less sunshine.
Second birthday in Etk! I surely
thought that I should be at home by this
time. No ship has come yet and I
wonder where the "Cluett" is. For the
sake of the crew, it is to be hoped that she
is out of the ice by this time. The day
has been signalized by Mac's giving

me the silk flag which E. L. H. in - (94)
trusted to him and which he took with
him to "Crocker Land" and Finlay
land, a total of not less than 3000 miles
of sledging. Mac did not think of
the anniversary when he handed
me the flag, but I could not have re-
ceived anything to-day as a gift that
would have pleased me more. I told
him so later, when it occurred to him
that this was my birthday.

Have been collecting ctenophores to-day
and have gotten at least six forms, all
beautiful. Am trying to preserve them but
without good success yet. Alcohol alone is of
no good. Picric acid shrinks them up too
much in strength used to-day. The Eskimos
call them *ikpiasuk* meaning "bag".
also got a lot of the little pteropod(?) called
the *awak* or "walrus" on account of its
appearance. There seems to be much
plankton in the bay.

More of all the topics came down today
and the Eskimos now here moved into
their igloos. Parikpa has built an igloo
from the smaller dog biscuit boxes about
5 1/2 yards east of the house, while Akpu-
tiasao has the big stone igloo close to the
house on the west.

Jot, Parikpa and Oodie went up to
Littleton Island and vicinity today on
a hunting trip, the first two in their kayaks
and the last in the "flatty".

Kahda and Megipu were keen assist-
ants to me to-day. When they saw what I
was after they went along the bank and
their sharp little eyes would descry the
jelly fish before my slower vision could
get to work. Megipu brought me several
in her hands, carrying them very carefully.

16 September - Saturday. ^{Max 26.2° Min 19.6°} (95)
Temp. min 20°; 8a. 24°; 12m. 25°; 4p. 25°; 8p. 23°; 23°
Overcast or cloudy all day. Moderate northwesterly
breeze in the morning. Calm afternoon.
Captain finished fixing up windows and
all double windows are in place except those
in main room, which will not be put
on till the weather is much colder because
they reduce the light considerably and we
need all the light that we can get.

Mac went up the fjord in his kayak
and visited lake to take soundings but
the ice there was too thin to support him
and he could not make them. Wi-Wi
is doing our cooking, in Jot's absence.
Put some of my ctenophores into 10%
formalin solution to-day.

17 September Sunday. ^{Max 24°; min 16.9°}

Temp. min 18°; 8a. 22°; 12m. 23 $\frac{1}{2}$ °; 4p. 21°; 8p. 18°; 12a. 16.9°
Cloudy morning but clearing toward noon.
Cloudless after noon. Moderate N.E.
wind in morning increasing to strong
breeze (5-6) by noon and after. Beautiful
day though the wind is keen.

Went up gorge where Captain Comes gets
our water and walked along hill.
Elok is a bad place for land walking.
Ahninga took her tunic down today. Mac
says that many of the Eskimos consider
her to be the handsomest woman of the
tribe. He thinks that Ivalich takes the prize,
while I think that Alnadrak is the best
looking of those whom I have seen.

Wi-Wi finished papering the upper part
of my room with newspapers, making it
lighter and more cheerful. She cut the
captain's hair to-day, giving him a regular
fire fighter's clip, though somewhat ridged.

18 September. Monday. 12, 190 | 96

Temp. 8 a. 17°; 12 m. 16 $\frac{1}{2}$ °; 4 p. 18 $\frac{1}{2}$ °; 8 p. 18° ^{max. 20°} min 16°
Sea began to rise minimum for the calendar day.
Nearly cloudless in morning, but began to cloud up soon after noon and by 4 p. m. was mostly overcast. Snowing ~~a little~~ at 8 p. Strong East wind (6) at 8 a.m. N.E. 4 at noon and N. 2 at 6 p. and later.

Tried to get more *Beroë* sc but saw only 2. They were fairly large but one was in bad condition and I had to throw it away.

Real ice-foot began to form last night. Ice first incrusts the stones and bottom in upper part of tidal zone and then grows seaward + downward until ^{its} thickness is nearly equal to the average range of the tide.

Climbed up nearly to top of Thermometer Hill (1200 ft.) About 700 ft. above the sea the gneiss gives place to sandstone and quartzite. Many ripple marked layers in the SS. Above Provision Point there is a considerable area of the gneiss which is well smoothed, grooved and striated by old glacial action, - the first good example of this work that I have seen.

From the high land I could see much floe ice northwestward toward Pin Island but there is none to the west, SW & S and not many bergs. There is nothing up this way yet to hinder the coming and going of a vessel.

about 6 p. m. Jot, Panikpa and Oodie came in from their hunting trip. They saw very few ducks, a few hares and no caribou. Lots of walrus from Sunrise Point northward.

Snowing thickly about 8 o'clock. If this keeps up so much slush will form that the fjord will freeze over.

19 September, Tuesday. (97)

Temp. 8 a. 14° ; 12 m. 20° ; 4 p. 20° ; 8 p. 19° ; 12 mid. 19° Min $12\frac{1}{2}^{\circ}$
Cloudless. N. E. wind 2-3. Cloudy, p.m. Max 20.6°
About 2" light feathery snow fell last night.
Narrow band of pan ice has drifted down
across entrance to fjord and southern
side of fjord is skinned over with ice
this morning.

Collected a few more ctenophores in
the freezing water. They are scarce now.
Captain has been putting some more boxboard
sheathing on the wall of the shed.

This evening the fjord and bay are nearly
covered with thin film of young ice.

20 September. Wednesday. Max. 20.2°

Temp. 8 a. $16\frac{1}{2}^{\circ}$; 12 m. 20° ; 4 p. 19° ; 8 p. 18° ; 12 mid. 19° Min 16°
Some high stratus clouds in morning
followed by cloudless afternoon. Wind
strong (5-6) from N. E. most of day.
Fjord and bay are nearly clear of ice and
it is almost gone from outside. The
way in is clear, but no ship comes. It
has been a beautiful day aside from the wind.
Snow is driving off from the ice cap.

Captain closed opening in shed roof in front
of door, except for small lookout hole.
Am discussing with Mac the feasibility of erect-
ing the seismograph. We are going to try
to put it up in the meat room at the corner
of the house. Clock ran for all of first year or
more tho. Fitz said it was no good and that
I knew it was no good when I sent it up. Ab-
surd! The clock was in perfect order when
it left the Museum. Fitz simply "lay
down" on his job. Probably did not know
how to set up the seismograph.

(98)

21 September. Thursday.

Temp. 8a. 18° ; 12m. 19° ; 4p. 19° ; 8p. $17\frac{1}{2}^{\circ}$; mid. 17° ; min 17°
 Cloudy 83. Noon Q N.E. 4. 8p. N. 3. max 18.9°
 Little granular snow at 8a. Light feathered snow
 ca 6 p. + thick in the south.

Took clock down. Cleaned escapement +
 moved electric contacts out of way + oiled it.
 Started clock going at 10:55 a.m.

Worked some this afternoon on "Cluett"
 article. Walked out from 4:30 to 6 p. going
 along a mile up fjord along trail on steep
~~nor~~
 southern shore. Much ice smoothed pink
 granite half mile from house.

22 September. Friday.

max 21.5°

Temp. 8a, $18\frac{1}{2}^{\circ}$; 12m. $20\frac{1}{2}^{\circ}$; 4p. 19° ; 8p. $16\frac{1}{2}^{\circ}$; mid 16° ; min 16°
 C, 23; C, N.E. 4; C, N. 4; C, N. 4; snow N.E. 4.

Captain made me a nice lamp shade out of
 wire and a piece of red window shade; also one
 for a dining room lamp. He is going to make
 two more at least.

Went up the fjord in the "flatly" with Mac.
 Wind was blowing out the fjord quite
 a breeze and it was hard work for Mac
 to row against it. I found it so cold
 that I got him to put me ashore about
 $2\frac{1}{2}$ miles from the house and I came back
 along the trail on the steep north shore.

Rather hard climbing sometimes over
 the rocks and icy grass slopes. In several places
 the talus slope is literally whitewashed with
 bird lime from the alkeputtiakts, and
 there must be even more of the birds here
 in season than at Parker Snow Bay.
 Met several of the eskimos on the slopes.
 Little Megipsu was tumping two books and
 Alnabuk had Ahriingak's baby in her

hood. Six foxes were brought in today and Oodie got four hares. Mac reported (99) about six inches thickness of ice on the lake at the foot of the glacier. He got a depth of $82\frac{1}{2}$ feet in the middle of the lake.

Kahdah and Meqipso came into my room this evening and were interested in watching my game of solitaire. They are nice interesting children and I wish that I could talk with them.

23 September. Saturday.

Temp. 8a. 15° ; 12 m. $18\frac{1}{2}^{\circ}$; 4p. 17° ; 8p. $13\frac{1}{2}^{\circ}$; 12p. 13° ^{now} 18.6°
C, N.3; C, N.4; B, N.5; B, N.5; B, N.E.5 min 12°

This morning went over to gneiss ledges above Provision Point and a mile or more beyond, photographing the effects of glacial action. Another beautiful day, aside from the wind, which was much stronger and keener out-there than at the house. Peary had his house at Provision Point and found the wind extra-^{ly} trying. It is much colder there than where the C.L.E. house stands.

24 September. Sunday.

Temp. 8a. 11.8° ; 12 m. 13.3° ; 4p. 14.8° ; 8p. 15.1° ; 12p. 17.8° ^{now} 15.1°
C N.E.5; C N.S; O, N.5; O, N.S; S, N.E.5 min 11°

The fjord will surely freeze over when this wind dies down, though everything is clear now. This evening read Schley's account of the rescue of the survivors of the Greeley expedition - a thrilling chapter to one knowing something of conditions up here. Accomplished 22 June, 1884, very early in the season but not a day too soon for the men would probably have all been dead in another 48 hours.

Oodie, Kahda and Meqipso made pretty group, clustered around lamp on floor, looking at pictures. How much do they comprehend.

Panikpa came in bringing the body (100
of a hare for trade and Mac has been
using him in work in Eskimo vocabulary.
The smiling, pleasant old man is a welcome
visitor, but we are not in need of fresh meat
just now, though we have to buy in order
not to discourage the bringing in of the stuff.

25 September. Monday.

8a., 20.6°; 12m. 21.5°; 4p. 22°; 8p. 24°; 12p. 26°, min 17.1°
0, N.E. 3; 0, N.E. 2; S, N. 3; S, N. 3; 0, 0 Max 26°

This morning went to cairn on top of thermometer still with Mac to see thermometers which he put there a week ago. min. 8.9° Max 34°. His aneroid read 1000 feet; mine 1025 ft. Open water west and south, but outlook was stormy. Moderate breeze blowing out of Foulke Fjord, but flat calm beyond the islands, in bay where Hayes wintered in 1860-61. Top of hill is formed of old diabase cap 30-40 ft thick, a sill now lying on quartzite of Haronian age. Noted excellent solifluction forms of gravel and boulders. Collected some specimens, see Vol. Note Bk. No. 2. Flock of ducks came into our cove this evening and Panikpa got one.

Put box 78 out with other fox skin boxes.

26 September. Tuesday.

8a., 24.2°; 12m. 28.5°; 4p. 28.1°; 8p. 28°; 12p. 27.9° Max 30°
C, S.W. 3-4; C, S. 4; C, S. 4; 0, S. 5; 12p. S, S. 4 min 25.4°

Rather stormy, disagreeable day, looking very bad out in the Sound. The southerly wind has driven a small amount of ice including some little bergs. If the latter stay here, our water problem will be well solved, and just in time too, for to-day Captain Comer scooped up the last of the water in the hollow in the rocks of the gorge

whence he has been getting our (101)
water, ever since we three came up
from Unalak.

This morning Mac fitted shelves into the
space formerly occupied by the clock in
the general room.

This evening we had a great discussion over
the question the world is growing better or
worse. Job thinks it stationary. He also
thinks that we should be miserable, discon-
tent and unhappy if we were to do only
the things that are good for us and were
not to yield to gratification of our mo-
mentary desires and appetites. Present
enjoyment offsets future suffering,
the latter being more or less prob-
lematical.

27 September. Wednesday

max 28°

8a, 26°; 12m, 27°; 4p, 26.2°; 8p, 26.6°; 12p, 27 min 24.5°
Overcast with light (2) N.E. wind all day after 8a.
Good day for hunting and Mac, Job, Parukpa
and Oodie went out; the first up Littleton Island
in the flatly, the others in the fjord in their
kayaks. Mac brought back a good bag - ~~at~~
~~10~~ eider ducks and three sea pigeons together with
a box of duck eggs from the a cache at the island.
Job got a small seal and Oodie a large one.
Wi-wi made up a pillow for me today from
the eider duck feathers that she has been saving
for the purpose. Oodie is 16 years old.

Job argues that everything has life and that the
universe has always existed and always will
exist, i.e. had no beginning and will have
no end.

28 September. Thursday.

8a, 28.5°; 12m, 27.9°; 4p, 27°; 8p, 27°; 12p, 27°; min 26.1°
S, N.E. 2; S, S.W. 1; S, O; S, O; S, O max 29°
Another good day for hunting, though snow is
somewhat disagreeable. Job got two seals, Oodie one

Captain succeeded in dipping up (602 another supply (14-15 gals) of water from the hollow in the gorge. He and Mac cleaned the iron tank, with Wi-Wi's help, and brought it in and set it in its place for the winter at the end of the store. Filled it with hard ice blocks from the beach. They also moved two masses of fresh water ice to the shore, hoping to keep them for the winter. Worked on "Cluett" article.

29 September. Friday.

8a, 28.2°; 12m. 29.2°; 4p. 31°; 8p. 27°; 12f. 26.5°; min 25°; max 32°
0, 0; 0, W2; C, N.E. 3; B, 0; 0, 0.

Mac, Jot, Panikpa and Oodie went out walrus hunting w/o success except that Mac got a few ducks. Kahda and I went up the fjord in the flatly hunting seals, but saw none. Lots of Beroe and Callianira in the water, some of the former being as large as any that I have seen here. Kahda is an interesting little companion. We had scrambled eggs for supper.

30 September. Saturday.

8a, 28.7°; 12m. 28.8°; 4p. 29.4°; 8p. 41.2°; 12f. 38°; max 43°
min 26.5°
C, S 1; C, 0; C, S 1; O, N.E. 3; 0, N.E. 4.

Kahda went out with me again in the flatly. We went half way (2 mi) to ~~Brook~~ Sunrise Point, following the other men, who went walrus hunting in their kayaks. We did not go quite far enough to see any walrus, since I turned back to escape the wind which I thought was coming, tho' it did not come. They saw walrus but got none. When returning Mac saw one at or within the entrance to the fjord. Jot, Panikpa and Oodie each got a seal. We have five now, which pleases us - Captain Comer stenciled and stamped some October calendars for us today.

1 October. Sunday. (103)

8a, 29.8°; 12m. 33°; 4p. 33°; 8p. 32.8°; 12h. 28.5°; ^{Max 43} min 28
S, S.1; C, S.6; O, S.5; O, S.3; S, O.

Jot was going out this morning after seals but gave it up when he saw how suddenly the barometer had dropped this morning and within an hour a heavy south wind struck us and white caps were running in our cove. We all have staid in today. I needed rest after my two days of rowing. Ahuingah made an anorak for me from some fine khaki that Mac had. Kahda learned to write his name today and he made some drawings for me of a man in a kayak harpooning a walrus and of two sealatis chasing a polar bear and her cub. He is a bright boy.

2 October. Monday.

8a, 29°; 12m. 30°; 4p. 26.8°; 8p. 28°; 12p. 27°; min 25.8°, max 30°
C, S.E.2; C, S.1; C, O; S, S.E.2; S, S.3.

Climbed thermometer tree and got reading of max 40.6°, min 21.3° for past week. Thin film of ice over the exposed rocks of the slopes, due to the alternate freezing and thawing of the past week, made rather hard walking. Saw some tracks of hares, but no hares.

Oodie killed a large bull walrus in entrance to harbor. Mac and Jot were on hand, and Captain Comer went out in the flatly and helped tow in the carcass to shore; but when it came to dividing up the meat, Oodie and his friends got two-thirds of it although they were not really entitled to nearly so much, on account of the work done by our three men in securing and cutting up. Such is life up here. "The Kablemas have lots of things, they don't need this" is their evident opinion. Well - noblesse oblige. Fjord filled up with ice this evening.

3 October. Tuesday.

(104)

8a. 27° ; 12m. 28° ; 4p. 23.5° ; 8p. 19.1° ; 12p. 19° min 17°
0, S.E. 3; 0, S.W. 1; S, 0; B, N. 3; B, N.E. 4 max 29°

Mac took an excursion onto the hills back (N) of the house but saw no game. Captain is suffering with rheumatism in his right knee, which he strained years ago. Got in some work on the Cluett article - this afternoon Mac unpacked the typewriter and I have been using it with comfort this evening. Beautifully clear and calm this evening at 10 o'clock. Ice going out.

4 October. Wednesday.

8a, 11° ; 12m. 17.3° ; 4p. 12.3° ; 8p. 13.5° ; 12p. 19.5° min 15°
B, N.E. ?; B, N.E. 3; C, N. 4; B, N. 3; B, N.E. 3 max 21°

Fine day with occasional strong gusts of keen wind. Walked out this afternoon beyond Provision Point, about a mile from the house. Some ice left in our bay. Worked on "Cluett" article. Called in all the igloos.

5 October. Thursday

8a, 8.2° ; 12m. 7.8° ; 4p. 8° ; 8p. 8° ; 12p. 7° , min 6°
C5, N.E. 5; C2, N. 2; C6, N. 2; C5 N.E. 5; B, N.E. 5 max 14.8°

Beginning here the figures after C denote degrees of cloudiness in tenths of sky. Did not go out for walk. Too windy. Driving snow in air at times. Worked on "Cluett" article. Discussion over scurvy and its absence on board "Cluett." Probably due to fresh meat that we managed to secure in spring and summer, seals & birds. Last day for coming of ship, according to Captain Conner, all hope gone now.

6 October. Friday. (106)
8a, 5° ; 12m, 8.5° ; 4p, 9° ; 8p, 10° ; 12p, 10° ; Min 4.5° , Max 10°
C1, NE6; B, NS; C1, NE5; B, NS5; B, NE4.

With Mac's sanction and help and Captain Corner's help began overhauling Green's boxes in a search for the various parts of the seismograph. Found some of them. I cannot understand Fitz's not setting up the machine, he did not claim to Mac that any parts were missing. The clock runs all right. Ice covers most of fjord except our bay, but Mac does not think that this will stay.

7 October. Saturday.

8a, 10.5° ; 12m, 17° ; 4p, 16.3° ; 8p, 18° ; 12p, 16° ; Min 7.3°
C6, NE4; C6, 0; C5, N1; 0, NE2; C5, 0. Max 16.3°
Fjord, including our cove, wholly frozen over. We hope now that the calm weather will hold until the ice becomes thick enough to ~~hold~~ remain in place. Found box containing drum, needle arms etc. of the seismograph. Its condition showed without doubt that it had never been opened since it left Georgetown University. The same was true of box No 5 which I opened yesterday and which contained the laptop, spare parts etc and a note in Father Tondorff's handwriting. Captain Corner and I unpacked the two boxes containing the major portion of the frame and we were positive that one of these had not been opened before, because the packing was that of an effect and not like that of the other box which had been unpacked and repacked. It furthermore contained a legend ~~one~~ ^{in pencil}

of the interior boards that it had (107)
been "facked" by Snorges (?) Georgetown
University, Washington, D.C.: This board
was one that would almost certainly
have been destroyed or lost had the
box been opened before.

8 October. Sunday.

8a, 8°; 12m, 7°; 4p, 8°; 8p, 11.7°; 10p, 10.9 min 5°
C3, N3; C9, N4; 0, NE1; S, 0; S, 0 Max 15°

Snowing briskly at and after 8 p.m. This
will check the rapidity of the freezing,
but perhaps the ice is strong enough
now to hold its place, provided no
heavy southwester comes within a
few days. Walked around to the Post
to get two small monkey wrenches from
the power boat for use in setting up the
seismograph.

Quiet day, not much work going on, it
being Sunday. Concert in evening.

Captain Corney has many tales to tell of
the hard life on board a whaler and the
hardships and impositions practised upon
the sailors. The strange feature of it all,
to me, is that he seems to justify such
treatment, with all its cruelty, brutality
and dishonesty. I could not help telling
him to-day that he was doing his best to
lower the good opinion that I had had of
him before starting on this voyage. He
tries to bring us to a quiesce in his view
of the matter, rather than to admit the jus-
tice of any other viewpoint, just as he tries
to make these Eskimos talk like "his" na-
tives of Hudson Bay and curses these
people because they are not like those.
His "crows" are always the blackest
oodie was on the ice to-day.

9 October Monday -

(108)

8a, 19.2° ; 12m, 19.5° ; 4p, 16; 8p, 13° ; 12p, 10° ; min 10°
0, SW2; 0, NE1; 0, 0; 0, NE2; Hwy, NW3; max 19.9°

Six or seven inches of light, fluffy snow
fell last night, but even to-day's light
winds have been strong enough to
drive most of it off the ice. Kakida
was out on the bay ice today, keeping
near shore and continually testing
it with a stick.

Worked on the seismograph all day to-
day and made much progress. I feel
sure that I can set it up all right
if some of the rusted parts can be re-
placed. The two boxes, containing pen-
dulum and weights, which ~~we~~ ^{had} open-
ed today had been opened before and
repacked.

10 October. Tuesday

8p, 6.6° ; 12m, 6° ; 4p, 3.8° ; 8p, 1.5° ; 12p, 0° min 0°
C7, NE4; C3, NE3; C2, NE2; B, NW5; B, NE5 max 10°

a beautiful day, though a little windy,
but I have staid in all day at work
on the seismograph. One of the thrust pins
connecting the heavy weight with the arm
is so badly rusted that it cannot be
used & I am afraid that this will throw
out any use of the apparatus. am
going to try a scheme tomorrow for
repairing it. It must have been
all right three years ago. I can see
no reason for Fitz's not setting up
the seismograph the first time.

It seems certain that he made no ade-
quate effort to do this part of his work.
I am however seriously by having
no directions for setting up and
running the machine.

11 October. Wednesday.

(109°)

8a, -1°, 12m + 5°; 4p. + 2°; 8p. 3.5°; 12p. 4.5° min -1.2°
0, N4; 0, N3; 0, N2; 0, N1 max + 5.2°
Spent day mostly on seismograph - all in
shape except the thrust arm already mentioned +
corrections ~~with~~ betw. the arms and the re-
sording needles, which I have not identified
yet. Opened two boxes of Green's books in search
for books on seismology, no success -
But we got two like thermographs, which we
set running at once. This has been a
pokey day and so cold that I expect to go onto the
ice tomorrow.

Constant rim of bangs between Captain
Cosier and I over misdeeds of whalers and
characteristics of Provincetown.

One of Fitz's books - Thoreau's "Walden" in limp
leather bears the following dedication.

March 21, 1915

Etah, North Greenland

To Fitzhugh Green -

With appreciation of unselfish
friendship and tenacious courage that
make him so well worth while -

W. Elmer Ekblaw.

I cannot reconcile this sentiment
with the complete distrust in Fitz ex-
pressed over and over again in the
past year by Ek, who told me on the
"Cluett" that he was confident that
Fitz tried to poison him on the start
on the first start for Crocker Land and
said that he could not trust Fitz far
enough to undertake a twenty mile
journey with him alone. Again and
again has he said to me that Fitz is
the most thoroughly selfish man that
he has ever known, hence there
seems to me to be great insincerity in
this dedication - and Ek is always
claiming to be absolutely sincere.

12 October Thursday.

(110)

8a, 6°; 12m, 7°; 4p, 7°; 8p, 9.5°; 12p, 8°; min 4.1° max 9.5°
0, N2; 0, NE 1; L1m, N1; H1m, 0; S, 0. Snow 6" +
The week is passing very dull and lousy as
to weather. A little fine snow was falling
at four this afternoon and this increased to a
heavy snow storm by six o'clock. Un-
usual to have so much snow here
without wind. Have spent most of
day on seismograph. Overhauled
another of Fitz's boxes looking for
a book or books on the machine, but
without success.

This afternoon walked up the torrent bed
a little way, then went out on to the
bay with Kohda and Negissie for a
walk of about two miles. Ice is about
7 inches thick and as smooth as a floor
except for the slight irregularities due
to the snow. Surface is still wet
from the exuded salt.

Great discussion this evening over tem-
perature of sea at various depths &
throughout the Arctic. Job contends
that no fish can live in water of 28° F
because the fresh water in its system would
freeze and kill it (which he says is)
He says that after a certain cold snap
at Provincetown dead flounders
were dredged up in the harbor each
of which contained a lump of
ice. He sweeps aside the fact
that fish do live in the waters here
at Etah &c even in the winter.

13 October Friday

8a, 15.5°; 12m, 16.5°; 4p, 17°; 8p, 16.2°; 12p, 18.2° min 8.1°
0, N3; S, N1; 0, N2; 0, 0; H1m, 0. max 17°

Got seismograph together so that (111) it would run all right in my room. Quite pleased with success, since I was wholly unfamiliar with the instrument aside from its basic principle and had only a catalogue picture to guide me in the work of setting it up. Next thing to tackle is the electric connection with the clock. This may give some trouble though I have the batteries all right.

Walked over to Provision Point today with Kah da and got copper wire from power boat.

Mac immersed a bottle of fresh water for six hours in sea water, wh. temp. was 28.7° but it did not freeze.

Captain papered most of his room today with sheets of botany paper - gray on the walls and white on the ceiling. Looks fine and very neat.

14 October, Saturday.

8a, 14° ; 12m, 12° ; 4p, 11.8° ; 8p, 12.8° ; 12p, 12° max 17°
min 8.1°
C5, N3; C3, N4; C1, N3; B, N.3; B, N.2.5

So busy working over clock and connecting it with seismograph that I did not get out for a walk. The day has been fine but windy. Sun is still visible in SW this afternoon, the first time that we have seen it in a week. Had no difficulty in getting the clock to run the time signal on the graph, thus disposing of the Fitz's contention that the clock was no good. What a pity it is that he fell down so on his work! He could have set the apparatus up and got it to running all right three years ago much more easily than I have done it now. But it is not in its fine position yet.

Mac and Captain hauled freight up from beach & stored it beside house. (1/2)

15 October. Sunday.

8a, -4° ; 12m, 6° ; 4h, 1.4° ; 8h, 2.5° ; 12h, 1° ; min. -5° ; max 11.1°
B, N6; B, NE6; B, NE2; 5° N, 5; C1, N2

Invoked a paper and put it on the seismograph. Got records of movements of house floors. Much pleased with success. Walked over to Dog Island this afternoon. Beautiful day and clear sunset at ca 3:15, but wind very keen.

16 October. Monday.

8a, -2° ; 12m, -3° ; 4h, -3.8° ; 8h, -4° ; 12h, -3.1° ; min -4.1°
B, E5; B, E5; O, E7; B, E8; B, NE6 max -8°

Smother of snow drifting all day with heavy squalls of snow during middle of day. Jot calls this as bad a day as he has seen here, but Mac does not. Too severe to go up thermometer Hill to-day to get the record and to-day's low temperature will have spoiled last week's mark. Weight $185\frac{1}{2}$ lbs

Ice $9^{\prime \prime}$ thick this morning. Adjusted seismograph and ran wires to the room where it is to stand.

17 October. Tuesday.

8a, -2° ; 12m, -3° ; 4h, -3° ; 8h, -5.8° ; 12h, -4° ; min -6.8°
C5, N2b; C1, N25; C1, N26; Hwy N23; H, E2 max -1.5°
Still very windy, but I walked out Dog Island and Mac went up to the cairn and got the record: min -95° ; max 20°

Meat room was cleared out for reception of seismograph.

Still working on adjustment of seismograph, synchronizing clock therewith.

Mac weighs 184, Captain Comer 221, Jot $137\frac{1}{2}$. Captain Comer has fixed up his room in very neat and attractive fashion, having tack-

ed sheets of light gray blotting paper (113 on the ceiling and dark gray on the walls. Later are decorated with some of Jot's colored drawings of schooners and Eskimos' (Oodie & Kahda) pencil drawings of kamiks, igloos &c.

18 October. Wednesday.

8a, 1^o; 12m, 1^o; 4p, 1^o; 8p, -8^o; 12p, 1^o. min -2
0, E6; H, E6; 0, E4; 0, NE3; H, NE4. max 1

So busy moving seismograph into permanent quarters that I did not get outdoors at all, the day being furthermore blustery. Captain Corner leveled off the floor (ground) then he and Mac lined the room with an old tape line, Mac determined the meridian line for me and then the two carried the seismograph frame in. Captain and I leveled up the frame and Jot adjusted the heavy mass and I put on the arms. The iron sub-bases rest on frozen gravel and are imbedded in the same material. My own room seems large now, with the seismograph gone from it.

Kahda and Megissu came in to play cards with me. They are interesting children particularly the boy. They were afraid that the evil spirit was outside, so Kahda proposed that he sleep with Mac and Megissu with me, but they finally went home.

19 October. Thursday

8a, -4^o; 12m, -1^o; 4p, -1^o; 8p, -2^o; 12p, +5^o; min -59^o
13, N4; H, NE3; H, NE3; H, NE3; H, NE3 max -1^o

Got seismograph mechanism to running to-day, by removing all the oil from

the worn of the drive. Also con- 114
nected up the time register and set that
at work. Kept "blue flame" lamp burn-
ing under the clock-work all day, but have
extinguished it for to-night.

Out for an hours walk before our noon
dinner. Wind very strong in middle
of fjord. This morning got harnessed
two pups, ~~the~~ four of them, for the first
time, using the mother as a leader.
The team started off and went all right
after a little trouble in harnessing,
the pups following the mother willingly.

After nine this evening Tahda rushed
in stark naked - the boy had apparently
been left alone in the igloo next door
after he had turned in for the night. He
hung around here an hour before
going back with Ahminah and the rest.
Pretty cool inside and cold out doors
for the "altogether"!

Wore my rabbit skins stockings for
first time this fall. Have been using
two pair of woolen socks and an inner
pair of kamiks for some months, as
being more comfortable during the
warmer weather.

Have been looking over Coote's "My
attainment of the Pole" this evening.
It is filled with false and misleading
statements and vicious lies. It seems
a pity not to publish a book exposing
and refuting them.

20 October. Friday.

8a - 1; 12m, 3° ; 4p, 6° ; 8p, 6° ; 12p, 5° ; min - 10.8°
C3, N3; O, N1; Nuity S22; B, W3; B, W4. max 6°

Walked out to Starr Island, 2 miles 115 from house, where Fitz and Jerome had their cabin and tried the wireless after it had failed at the house. The cabin is in fair condition and would do as a refuge, if we were so unfortunate as to be burned out at headquarters. Kahda and Megissu went with me and the boy's sharp eyes could see some walrus out beyond us. He killed two ravens which had gotten caught in fox traps belonging to Parrikpa and Almissah. Open water stretches away beyond the island and swings in a curve, convex eastward, to the shore near Sunrise Point.

Long talk with Mac on expd. matters.

21 October Saturday.

8a, 3.5° ; 12m, 7° ; 4p, 2.5° ; 8p, 5° ; 12p, 0° Min -28.0
C6, N3; 8, N21; B, N23; B, N22; B, N23 max 7°

This morning I started the seismo-graph officially on its work - but now the electro magnet on it is not working well. Two mile walk on the bay this afternoon sun hidden by clouds and high land.

Did some writing for use in my "Cheett" article for Mac.

Jot had his team out for a drive of some miles, after an amusing start in which the dogs got away from him with the Karmatic and he did not catch them this side of Provision Point.

Jot got mad last night over my running the typewriter and indulged in some unwaranted language about it. It seemed to me that he cried before he was hurt, since I stopped anyhow at 10:05.

I told Mac to-day that if Jot had any complaints to make that they should be made to him (Mac) and not to me direct.

22 October. Sunday. (116)

Beautiful day after about 10 a.m., when the snow and heavy wind ceased. Two miles walk toward noon. Sun just below the skyline of the hills in the SSW. Yesterday must have been his last day of visibility from the house, hence he will be out of sight from here for four full months.

Kappa has carved a schooner rigged steamer out of a block of pine today. crude of course, but doing well for an uncivilized boy of his age.

About 6 p.m. the Esquimos came in from their caribou hunt. They came down the steep terraces behind the igloos. I wish that it had been light enough to see the seven loaded canoes descend that bad slope. The men and women have been gone seven weeks and have had pretty ~~any~~ good luck, getting \$8 (?) caribou, 2 bears and some fish and foxes. The people look fat and healthy and they brought back all their dogs. Quite a record. They went as far as the Humboldt glacier, but got their caribou on the hills this side of there. Atputishao was lying rolled up in the skin of a deer that he had just killed. He woke up to find a fox gnawing at the carcass, but his rifle was beyond the fox & the animal got away. A. lay down again rifle in hand and by and bye the fox came back and so close to the man that he blew his head off.

some of

Mac furnished the men with (117) cartridges, tobacco and part of a team of dogs and we get in return several skins, ~~two~~^{some} fine haunches of venison and some ⁽¹¹⁾ salmon trout.

We had ~~the~~ stew of young eider duck to-day. Delicious.

Yesterday Wi-Wi, who was on duty in lots morning absence made us a fine stew of young hare. Panikta brought it in two days ago - 7 pounds

Weight 186 $\frac{1}{2}$ with somewhat heavier clothing on than on Monday. At 7. sweater, vest, flannel shirt, sealskin pants, kamiks + rabbit skin stockings. "annie" underclothing.

The annual fall caribou hunt is quite an event with the northern members of the Smith Sound since it provides them not only with food but also with skins for sleeping bags and kooletahs. Success this year was not equal to that of some recent years. No young deer were seen. Men saw some wolf tracks showing that one or more wolves had come across the channel from Ellesmere Land. Probably accounts for extra scattering of the caribou and absence of young.

The fish come from the most northern known locality in Greenland. They or similar ones have been taken in Lake Hayes in Grant Land. Those brought in this evening measure from 15" to 24" in extreme length and the largest one weighs 3 lbs now. Frozen solid of course.

23 October. Monday (118)

Cloudless, brilliant day without much
wind. Considered a rarity at Etah.
Eight Kanniks took the whole population
except Parikpa and Ahluksungah and
Kini and her two small children up to
the lake at the head of the fjord. Mac,
Jot, Itukashuk, Nucarpingah and I
went up onto the glacier and set a
row of iron stakes across it. Oodie and
Kakochia hunted rabbits, the former get-
ting one and the latter three. Oodie got
a ptarmigan too. The rest of the crowd
fished through the ice 50-75 ft from
the end of the glacier. Ice 2 3/2 inches
thick, water 12-13 feet deep. Kini is
still flowing under the glacier for we could
feel the lake ice moving under our feet
coincidentally with extensive cracking
sounds, and the water overflowed the
ice when the holes were chopped through
it. The cracking of the ice may, how-
ever be due to the pressure of the slow-
ly moving glacier. During the winter the
pressure arches up the ice near the glacier
so that a person may walk into the grotto
or tunnel thus formed. Akputisbas +
his family (Ahlingah, Megissu + Kahda) caught
three large and two small salmon trout.
Great joke on Captain Corver who came
up without any hooks. He thought
that Mac had them whereas Mac
had given them to him yesterday.
It was hard walking on the glacier, but
our Kanniks stuck to the ice pretty
well, if we kept the soles free from
snow. Went into two-meal a day regime.

26 October. Thursday. (120)

B, NE5; B, NE3; B, NE3; B, NE6; 0, NE5
8a, -1°; 12m, 3°; 4p, 3°; 8p, 0°; 12p, -2°; min -4.1° max 3°
Another remarkably fine day for Etah. Tho the wind seemed to me to be stronger at mid-day on the fjord than it was on the glacier yesterday. Kahda contributed the little fish which he caught and which seemed to be different from the usual large ones. To-day I have thawed out this and four of those brought back from the lake near the Humboldt Glacier and placed all five, wrapped up separately in cheese cloth in 75% alcohol in a five gallon milk can. Walked out across fjord and back, ca $2\frac{1}{2}$ - 3 miles.

We have lived high to-day. at 6ft. we had the big trout that Ahuiyah caught yesterday. Iot "smothered" it à la Labrador and it was delicious. Caribou steaks, fried, for dinner at 4 p.m. Then had merely a mug up in the evening.

27 October. Friday.

B, NE2; B, NE2; C1, NE2; B, NE3; B, NE2 max 4.1°
8a, 0°; 12m, 1.5°; 4p, 2.6°; 8p, .6°; 12p 4°; min -1.8°

Etah is trying to disprove Mac's characterization of its weather. This day has been best of all. We went again to the glacier. I rode up with Nucarpingwah and back with Mac. Mac took Samnik, Nucarpingwah and Akputishas, built cairn on south wall of valley in line with stakes, measured axial base lines and angles on cairn and stakes and took angles and base line for length of lake and distance from front of glacier - I went up northern valley to build cairn in line with stakes, but found trip along

talus slope so difficult that I did not accomplish its task. In many places the rocks are literally white washed with the lime from annual visits of the little ants. Collected some of the "pink snow" and placed it under the microscope. Spore-like character of the deposit easily recognized.

Had dinner at 4 p.m., baked young duck and fried hare, with custard pudding for dessert. Great!

28 October, Saturday

8a, 2° ; 12m, 8.5° ; 4p, 9° ; 8p, 9° ; 12p, 9.1° min 2°
Seismograph seems to be working all right and I fixed the sheet with diluted collodion, there being no shellac here as far as Mac knows.

Mac does not wish to overhance the fox skins with me and select the 50 for the Museum unless he is at liberty to take out also the skins needed for the additional specimen kappetahs wh. are desired for our series. I am not willing to use the skins thus on a count of my promises to Rasmussen (vide correspondence). When Ras-

Mussen left here on 8 September (123) but the distinct and amicable understanding between him and me was that the Expedition was going to trade for additional skins for the desired kahpetahs and such specimens as were lacking from our series. Mac says that this puts him in wrong and that he is not willing to do any more trading ^{to-day} after all that has been said. To-day however he agreed to trade for additional finished kahpetahs as opportunity might offer and the matter is left this.

Walked out about two miles along north shore of bay — to point this side of "Jot's Valley" — midday. Rosy clouds over Cape Alexander region. Celebrated Halloween this evening by playing "Jenkins" with the Eskimos. They are expert in locating the coin under the hand.

1 November. Wednesday.

 $8a, 12^{\circ}; 12m, 12.8^{\circ}; 4p, 19.8^{\circ}; 8p, 15.5^{\circ}; 12p, 17^{\circ}$. min 90

Mac went up to Brother John's glacier and built cairn on talus of northern side of valley in line with the stakes. He had to build in on top of a big rock in the little knoll slope, but was able to correlate it with a crack in the cliffs far above. He reports the lake ice bulged up in front of the glacier. He and Sammick cut through and found the ice arched about a foot above

the water. A series of curved (124) cracks concentric with the glacier front ~~are~~ have been developed in the lake ice.

Out for 3 + mile walk myself.

Unpacked scales and fixed up a 10% solution of $HgCl_2$ in hot water, but the salt crystallized out when the water cooled and I must make it up again with alcohol tomorrow.

Captain built snow igloo d'airance for the two family groups south of the house and is going to build another for the two north of us. Odd that the Eskimos should want or even be willing to have a white man build even such snow igloos for them!

Overbanded alcoholized fish with Captain's help. Slit abdomens of large ones. Wrapped up again with labels.

2 Nov. Thursday. max 17.5°
0, SW3; 0, W3; 0, NW4; 13, W4; 13, SW5 - min 13.2°
8a, 17.5°; 12m, 15°; 4p, 16.5°; 8p, 14.2°; 12p, 14.9°
Seismograph working well now, though magnet stopped for a time early this morning.

Mac and Sammuk went out to Sunrise Point and Cape Ohlsen. At latter place Mac climbed to top & saw continuous ice in every direction, with but few leads.

I walked out through middle of fjord 11a - 12:15p. ca $3\frac{1}{2}$ miles in all.

Eskimos are much and uninterestingly interested in natural history pictures and geography.

3 November. Friday.

125

Census of Etah at present:
West

Wes
Kothrimostigloo - Eetookashoo, Ahniash
Arklis, Alningwah. Next. Ahkpurt-
ashoo, Ahniash, Megissu, Tatara,
Alnadiuk, Kahda.
East of house - Panikpa, Ahtuksung-
wah, Kakotiah. Lasts accommo-
dinguah & Inaluk, Nucarpingwah
& Wilwi, Oodie, Ahkpurtashoo ("Igloosu-
ahni") and Dizie and Kawiaksuah
at our house - Sammuk. 22

Samnik and Kahda are the sons of Akdokahingwah who is living now at Kongardlookseah. Peary is father of former, but what white man of latter?

Eetookashoo and Kakotiah are Pa-mikpa's sons by a former wife.

Nucarpingwah is accommودating with her son and Kakotiah is son of Inaluk by Bob Bartlett. Kawiaksuah Oodie is Wiwi's son by a previous husband. The other two her children by Nucarpingwah Alnah'duh is Ahniash's mother.

Adding the white men total is 26

Mayak came in from Anorotok this afternoon with one of his sons, Aiopeeng-wah, for a visit. He brought me the pair of kamiks wh. his wife promised to make for me. They are good ones, of chevred skin. Mac is to give him 5 gal Kerosene.

for them. In the evening got (127)
Cut my hair and later saved my
ring in two after vainly trying to
get it off with a string after my soaking
it for three hours in hot water and
soap. Joint had swelled since I
put the ring on early in the summer.
Sorry to have to have it cut.

Wind very strong and a thick smooth
of snow drifting at 10:30 p. Brilliant
moon light.

Walked over to Dog Island this morning
wind was keen all right.

Dot cut Mac's hair and then Mac
clipped Dot's. The latter seems odd
enough to have done at the begin-
ning of cold weather, but Dot want-
ed it done. He looks queer all right.

6 Nov. Monday

8a, -6°; 12m, -4.2°; 4p, -5.5°; 8p, -5.1°; 12p, -6° min -8.5°
From 10:45 to 12 went out on the fjord
for the triangle formed by the house,
Provision Point and Dog Island.
The north wind was very strong
and keen. Decidedly windrag.
The wind has blown ~~all~~ the most
of the new snow off the ice or pack-
ed it hard so that the walking
is good now.

Mac went up on thermometer
tree this morning, wearing his
blanket shirt and no metsah and
found it very cold - said there
was a sensation as of burning
above his bear skin pants.

Planet, Jupiter (?) shone brightly (128) in the west at 11 a. and another, Venus (?), at 1 p. m. and the moon is brilliant this evening.

After a long halt in proceedings Nucapungash and Wiwi began again fixing up igloo under one living room for their occupancy. Captain helped, and seemed to be doing most if not all the carpentering. He has made two breast buttons, Baffin Bay eskimo style for the woman's large hood when she is carrying a child there and now Ahriah wants some so he is making her a pair - end of melted milk.

7 Nov. Tuesday -

8a, 2°; 12m, 3.9°; 4p, 5°; 8p, 3°; 12p, 3°. Min - 7.2°
In all day writing letters.

Presidential election to-day, but who are the nominees? We don't know, but we have had some great discussions over Wilson, Roosevelt Root and others. Nucapungash & Wiwi moved in.

8 Nov. Wednesday -

S, 82; S, 82; S, 82; S, S87; S, S86 max 27.5°
8a, 9.5°; 12m, 13.5°; 4p, 24°; 8p, 25°; 12p, 26.5°. Min 3.5°

Dot says that this is the heaviest snow storm that he has seen here. Fifteen inches of the light stuff had fallen by 2 p. m. Fully 30 inches has fallen in the past two months so thick all day that walking for pleasure was out of the question. This evening's gale will blow lots of the snow away.

Wrote several letters.

9 November. Thursday. (129)

S, 587; S, 35; C8, 582; O, SW 2; O, NW 3 max 28.3°
8a, 26°; 12m, 26°; 4p, 26.5°; 8p, 26°; 12p, 26.9° min 25.1°
Snow seemed to stop falling about noon. I should think that fully
two feet on a level had fallen in
this storm, which has been the heaviest
snow storm that our men have
seen here. Much drifted by last
night's strong wind. Big drift
in front of the house and under
the bank. Gangway completely
buried. Thick mush along shore
edge of ice foot. Heavy drift across
path to thermometer shelter and
back of house. Did not try to go
onto the bay but walked about near
house and igloos for a half hour.
Oodee tried going out onto ice with
snow shoes but found snow
too soft for good progress.

Writing letters; makes me
homesick.

Lizzie got a bath this evening -
Her first one I presume. She looked
cunning enough in Captain
Corner's wash basin and had an ad-
miring circle of Eskimos and
Kablunaks about her. She
liked it.

10 November. Friday

8a, 23°; 12m, 23.8°; 4p, 21°; 8p, 19.4°; 12p, 18.5° min 17.1°
Dull and dark. Some of the kauras
tits went out across fjord and had

difficult going. I followed their 1/30
trail on snow shoes, but I was fully
satisfied with the exercise by the
time I had gone a half mile and back.
Measured snow out in fjord as be-
ing 18", 20" and 12" deep - Too light
for comfortable walking even on snow
shoes.

Alniah had piblokts this after-
noon and gave an exhibition of
what I suppose was a rather
mild attack of this form of hysteria -
Resembled a case of singing drunk.
She dropped off her kanniks but did
not stop any further while in our
house. She went out doors without
her kanniks.

No one says he has never seen so
much snow here before at one
time.

at work all day on my "foxskin"
report to H. F. O. and beginning of
general rpt. First drafts.

Out across fjord - two mile walk.
Wore koletah, which protected my face
from the wind.

Captain Conner furnished some ex-
citement this morning at break-
fast. He took Lizzie, We-We's 8-mo-
old baby, in his arms as usual and
sat down again at table, but the
legs of the chair spread apart and
let him down gently onto his
back on the floor. His only con-
cern was for the child, but she was
not hurt, only scared. Joe said
that the Captain's belly rose like a
certain round hill near Pro-
vincetown and that Lizzie was like
a little sand dune beside it.
We-We said that the Captain was
trying to get into the oven but
was too big. Every body laughed but
Captain and Lizzie, and she soon
stopped her crying and was all
smiles again as usual.

8a-8; 12 m, -8°; 4p, -7°; 8p, -11.5°; 12p, ^{now -3°} ~~12.9~~ mi ^{now -2.9°}
Men finally got started for Unalakleet and along the line this morning about eleven. There were Sammick, Ahk-pootishoo, Nucarpingwah, Arklio and Etooka shoo. Accommodingwah started but ~~he~~ mi out thought the outlook was unfavorable and turned back. I rode out $1\frac{1}{2}$ mi with Etooka shoo and started to walk back. The wind was very strong and I was glad to accept Accommodingwah's invitation to ride, when he overtook me. It was cold enough then.

At work most of day getting material together for my "Clarett" article.

After dinner, while we were playing cards in came Oodee, Kawiaksuah & Kakotiah dressed in women's clothing, followed at once by Ahneenah, Alningwah and Alniyah dressed in the boys' suits. Kakotiah made a good looking girl and Alningwah looked much better than in her own clothing. Everybody was in a gale of laughter. We said that Wee Wee must not be left out, so she put on the Captain's old trousers and jumper over her own clothing and she looked comical enough, the cap adding the finishing touch. But an improvement was made even then by adding a pillow in front. All hands then went over to call on Paritpa and Accommodingwah. Soon they returned with these two men and their wives ~~with~~ wearing interchanged clothings so we had the house full of a merry

Mac took a flashlight of the 1/36 women and then of the men.
 After this, the native drum (kee-lai-tee) was gotten out by Mac and Almiah sang, followed by Enaluk and lastly by Anadwah who could not resist. She had come to see the fun, with cunnning little Tatara naked in her hood.
 They sang two songs, I judged, both in a minor key and seemingly without distinct words.

The drum is simply a membrane stretched over an oval frame and beaten with an ivory or bone wand. It is a small affair 15" or 16" long and is the only native musical instrument of the tribe, Mac says. Almiah is the best singer of the crowd and her voice is not bad. The boys complained that their legs were cold in the long kamiks and the women that theirs were hot in the bear skin pants.

Thanksgiving Day - which we cele-
 brated in good old New England
 style. Thankful that things are as
 well with us as they are and that
 they are so much better than they
 were last year. We only wish -
 aside from the ever-present desire
 to be at home ourselves - that
 our friends could know that
 we are so comfortable in every
 way, with plenty of food, fuel and
 clothing. Job got up a great
 dinner, of which the menu
 is as follows:

Apricot cocktail (apricot jubilee according to Jot) made from the juice of the dried fruit + 10% alcohol - We drank a toast, standing, to the health and happiness of our loved ones at home and expressive of our thankfulness that we are well and that things are as well with us as they are -

Roast venison, with dressing and gravy
Mashed potatoes and string beans
Raised biscuit and butter (oleo)
Squash pie. Mincemeat pie.
Cupcake with chocolate icing.
Fruit cake - Doughnuts.

Cinnamon roll.

Onion salad -

Coffee with sugar and (trumilk) cream
"Liberty Laugh" (a punch of apricot juice, strawberry jam juice, lemon juice + 10% alcohol)

Going some for the fourth year of the Expedition's stay in the Arctic.

Jot has been saving the coffee for months and the flour, sugar, trumilk and eggs for weeks in anticipation of the occasion.

Took 3½ mile walk before dinner - Day thickly overcast and very dark. Snow lightly afternoon.

1 December. Friday.

Very dark all day. Captain saw moon in first quarter this afternoon.

Four mile walk - Peahawahots Point.

Got in some work on "Cluett" article.

Mac will have a pretty good defense to make against any charges made by Fitz or Tang regarding their work and the opportunities given for doing it. Fitz lay right down on the job, Mac says, and practically refused to do anything, claiming that he was under no obligation to the expedition or the Museum since his salary was being paid by the Federal Government. Tang, according to Mac, was not interested in general zoology & was lazy about collecting and slovenly in caring for what he did collect or what was turned over to him as zoologist of the expedition. Certainly Fitz did not do what was right about the seismograph, the mapping or the tidal magnetic observations or the tides. Mac showed me skins and bones supposed to have been cared for by Tang which were in inexcusably bad condition through some one's neglect or ignorance. Mac always acknowledges the good work done by E. K. and Jerome. Dr. was always a kicker but all were bad at that.

— Lamp chimney cracked.

A perfect winter's day. Somewhat windy at midday but almost calm later.

Moonlight superb. If the weather in Melville Bay is like this the men are having a fine trip. How I wish that I were there! I could have made it all right in weather no colder than what we are having.

Four mile walk up fjord.

Developed 3 rolls films.

Captain filled a tooth for me -

The Arctic must be getting into our nerves for a discussion this morning among Captain, Jot and me over the use of the terms "corned" and "salt" beef came to some rather harsh words between Captain and me and then between him and Jot. Captain had been mostly out of the

argument, but after I got and (143)
I were through I asked him (G.C.)
for some information on the subject.
He would not give it, very bluntly
saying that he did not want to
get into the argument. I resented
his brusque manner - but
he meant no offence and I
ought not to have taken any.

Finished my letters and Mac gave the package to Accommodingwah to take to Oomanah. I gave the Eskimo the last two little plump of Upernivik tobacco that I had. He is much pleased to be the mail carrier. Eight kammatiks got away at 5:40 p.m. for the ship. ~~Ena~~ finally insisted on going with Accommodingwah and Kaviahksuah. Paunipah and Ahtooxoongwah and Käkotah also went - and the visitors including Mayah - Nääcarpingwah went along to visit his traps along the Crystal Palace cliffs and two of the boys will hunt rabbits. Quite an exodus.

Sixth perfect day in succession. Walked over to Dog Island and back before dinner. Venus is wonderfully brilliant. Last evening Mac spoke again of Fitz's having with my permission opened some of his (Mac's) personal packages at North Star Bay and given the contents to the Eskimos. I demanded more specific information and the master seemed to simmer down to one package of cheap jewelry without Mac's name on it.

I said that I did not know (146) that any of Mac's personal packages were in the large box of museum trading material. He said that I ought to have known all that was in the box. This would require a good memory indeed, but my belief still is that there was nothing of Mac's personal material in that packing case and that the small package of watches or cheap jewelry was bought by the museum. I said that I would not and did not intentionally give Fitz any permission to open any of Mac's personal packages. This must be looked into when I get home.

Two mile walk enough for me, the
wind being keen. Faint orange
hue along southern horizon at mid-
day.

Saviniuk and Munishoo (his bride)
Ahtpootashoo and Ermieiah
arrived from the south before dinner
with letters for and boxes from O.O.
Manah. Boxes contained flour,
sugar, butter, tea &c., some books
and sundries. Three hatchets, 8 pocket
knives, 11 tea spoons of my old trading
material - all turned over to Mac.

Trading material, apparently from
Fitz: 2 woolen scarves, 4 men's caps,
1 dozen pencils, 4 small bottles cologne,
1 dozen cakes toilet soap, a few yards
each of canton flannel, and two pat-
terns of gingham. I turned all this
too over to Mac. Of Fitz's treat
there remained 2 tins of sweet biscuit,
1 box cigars and $2\frac{1}{2}$ lbs chocolate,
to be divided among us four.

21 December. Thursday -

B, N26; B, NE4; B, NE6; B, NE4; C26 av. -17.24°
-13°; -17°; -18°; -19°; -19.2° min -21.5° max -7°

Only a two-mile walk, on account of the
wind, which was worse than yesterday out
in the fjord. Faint orange hue along south-
ern horizon & greenish light effect of the twi-
light was detectable about 20° upward.
Mac calculates that the winter solstice
comes here to night at midnight
(11:57 p.m.), hence we are now half

way through the winter night. (151)
The moon being absent (new on the 23rd) we are getting the maximum of darkness at noon to-day and to-morrow. Glad that to-day was such a beautiful cloudless day so that we got the full benefit and can compare it with a clear night at home. It is night all night here at noon now.

Captain put a cement filling into lower left first bicuspid this morning. This evening I bored four $1\frac{1}{4}$ " holes in my floor and two 1" holes in my outside wall for ventilation, putting pipes into the latter, and am going to try the effect of leaving them open and closing my door at night. Hope to sleep better.

My lamp chimney is a sight now with its cracks and its patches of adhesive plaster. We - We put the plaster on to-day. Jot has the only whole chimney ~~left~~ left in the house now, but we still have a few whole lantern globes.

Apparently ~~two~~^{one} of Mac's pups and one of Ahneena's have been eaten to-day by the big dogs. Strange too because the pups are now three months old. Too bad, too.

We are enjoying the coffee and sugar.

22 December. Friday. av -26.4

Took my two mile walk to-day, although
the temperature was the same as that
which knocked me out at Cape York
last January and a half-gale of wind
was blowing, whereas it was calm
down there then. No bad affect, be-
cause I was properly clothed today
and I am probably and apparently
in better physical condition than
I was a year ago.

Talked over the foxskin matter
with Mac this afternoon again,
in view of Peter's letter asking that
the foxskins which are to be handed
over to the Cape York Committee
by the expedition (museum) be sent
down to Thule this winter. He a-
greed to help me classify the
skins so that I can send the
sure "surplus" down by two of
our men next month. We
are to overhaule the skins on Tues-
day next. We also made out a
list of the things that we want from
the "Danmark" and from the supplies
left with Peter by E.K.

25 December. Monday -

The pups came back last night, to our
joy. They had been over at Porcupine
Point 4 days! Hungry little fellows!

We celebrated Christmas (154) in a way in spite of rather heavy hearts. To-day was far pleasanter for Captain Corner and me than it was a year ago. I gave each of my associates a half sovereign at breakfast. Later in the day Captain Corner gave each of us some of his ivory carvings. My piece was a polar bear which he made recently. Mac received a nice series similar to what the captain gave me last summer - kayak, whale, narwhal &c. I gave Ahneek & Weewat ~~some~~ ^{to} a polar bear which he made recently. Mac received a nice series similar to what the captain gave me last summer - kayak, whale, narwhal &c. I gave Ahneek & Weewat ~~some~~ ^{to} a polar bear which he made recently. Took my two-mile walk at noon, although the thermometer stood higher than yesterday, the day seemed colder.

Had a fine dinner in honor of the day, though it was not as elaborate as the one on Thanksgiving Day. ^{Flash} light photo-

In the morning after doing up the work, we - we dressed up in the South Greenland finery and came around to each of us in turn, shaking hands and giving us good wishes for the day.

After dinner all the Eskimos came in and we had games and trials of strength and agility, both kaboom and circuit style. The Eskimos are very fond of games of all kinds. Their own sport this evening consisted of pulling contests for the most part. Mac is first rate at managing such an evening, being sprightly and energetic in manner, agile and athletic, full of knowledge of games &c that can be played in a gymnasium. He was the life of the party. Kahda, Megiss'ook and the big boys had a wonderfully good time.

26 December, Tuesday (155)

$H, N3; S, N3; S, N3; S, N3; O, N3$ av. - 21.5
- 24; - 21; - 18; - 22; - 22.5. Min - 28; max - 15.8
Took my two mile walk between 2 & 3 p. m. -
dark and not very pleasant, tho' there was very
little wind and the snow did not a-
mount to anything.

Had long talk with Mac between noon
and 2 p. m. about expedition affairs. He
professes the most complete devotion to
the interests of the Museum and associ-
ated institutions with reference to the ex-
pedition and its affairs activities.
He thinks that I was hasty with refer-
ence to the foxskins but he promises
full help to enable the Museum and
me to keep the promises made to
Rasmussen and his committee.
He says (with much apparent correctness)
that he has been grossly misrepre-
sented by the members of his staff
with reference to the number of fox-
skins acquired by him and the man-
ner in which they were gotten. I said
that he ought then to insist on retrac-
tions by the men. He charges Peter
with much wilful misrepresentation
of the expedition and his (Mac's) dealings
with the Eskimos, according to Mac's
statements Peter must have misrep-
resented, or ~~and~~ at any rate greatly
misunderstood me too. Mac's
reports about what our men have said
about my dealings and statements
do not accord with my own recol-
lection of the facts. Parts of conversa-
tions seem to have been reported out
of connection with their context and
therefore in a wholly misleading way.
Mac claims that 60 of the foxskins

really belong to him, having been 156 procured with personal gifts of his. He professed the willing intention to turn these over to the Museum according to the contract, but he wanted to know what would be done about these in carrying out the promises which I made to Rasmussen. He said that he considered that he was entitled to turn these back to the Eskimos in payment of debts to them. (Expedition debts, I infer.) I said that the Museum would be willing to credit him with being the donor of the 50 skins which are to comprise the pelage &c series. This seemed to be satisfactory to Mac. He is severe in his condemnation of the attitude maintained toward the Expedition and the Museum by Green and Tanquary, who failed to do what they came up here ostensibly to do.

Green claimed that he and Allen were not responsible to or amenable to Mac and the Museum because they were employees of the Government and they were receiving no salary from the Expedition.

I frankly told Mac that I thought that events had shown that Dr. Hunt's complaint regarding the amount of food at Etah had not the foundation in fact that was claimed for it when it was made.

Mac started Ahneena at 1:57
work to-day on making a pair of
bearskin pants for Captain Conner
from one of the skins secured on the
Finlay Land trip last spring.

We are using the South Greenland style blub-
ber lamp made by Woocarpingswak to supple-
ment the light from our lanterns in living room.

Four mile walk. Pee-ah-wah-to's Point.

Wind sharp off mouth of stream gorge near
us, but none in lee of cliffs beyond.

Light, strange to say; seemed weaker to day,
in spite of cloudless sky.

Asked Mac to have fox skin boxes brought
in today. He said "All right"; but none of
them have come in.*

Mac & Jot say that this is an unusually
long-continued and severe cold spell
for Etah, especially for December.

Had to retire my lamp to-day, be-
cause chimney is too far gone to be clean-
ed. Am using a lantern. Captain
has today fixed up his chimney very well
by making a network of fine wire over
part of it. Does not seem as if the plan
would be practical for mine.

Moorn-i-shoo came in this evening
wearing a new anorak, made from
some plaid gingham that Mac gave
her for Christmas - on Sammick's
account, I suppose.

Mac brought in two boxes during evening

Seismograph works steadily (158) and seems to fairly sensitive but no earth tremors or shocks have been recorded, ~~unless~~ There was one on the 13th, ~~which~~ that did not look to me to be quite like an earthquake record.

Mac brought in two more boxes of foxskins to day to warm up a bit before we open them.

Out for a three mile walk this beautiful day, going up fjord as usual on account of the direction of the wind. Light seems slow in coming back this winter.

Began developing plates.

Mac reports the rate of the chronometer as ~~being~~ + 4 sec per day. For many days (18) the observations of 19 days indicate that the seismograph clock is now running with a regular loss of between 0.1 + 0.15 sec. per day, i.e. the loss as compared with the chronometer is between 0.2 + 0.25 sec. per day. Probably this is as close running as can be expected under the conditions under which the clock must work.

Stockasook & Arklio rebuilt snowshoes for me.

Walk of two miles across fjord between 2 + 3 p.m. Seems fine to have moonlight again and it is a comfort to think that when this moon wanes the day light will be getting pretty strong and useful.

In the evening Mac and I overhauled and reclassified the fox skins in 6 of the boxes. There are only 119 by count thus far. We are separating them into three lots: a series of 50 to illustrate variation in pelage from blue to white, a reserve of 70 skins from which kahpetahs may be made, if agreeable to K. R. to modify the arrangement between him and me, and a third lot comprising the remainder of our skins, which is to go to Peter now.

Jot repeated a statement he made some time ago.

Jot said this evening that Mac left nine boxes of skins with him in Feb., 1914, when the first start for Crocker Land was made.

He said that these were nailed 60 up and that there were three more which were not closed. Jerome had told me at the "Cluett" that there were 8 or 9 boxes of foxskins left in Jot's hands by Mac when the start for Crocker Land was made, and that he knew because he sealed them. Mene told me last winter that he counted 9 boxes of foxskins left behind thus by Mac. Mac, however, declared before Jot this evening that these statements could not be true because there were not more than 60 or 70 skins at headquarters at that time, all of which had been gotten with his own personal trading material. He then considered them to be his own, but later he came to see that they were not his according to the contract and he reported them all, with subsequent acquisitions, to the Museum. Jot made no reply.

31 December. Sunday. Ice $40\frac{1}{2}$ "

-18; -18; -16; -19; -19. Min -20.4; max -12.5

A beautiful day in every way. Took a load of furs over to the power boat & then filled out a four mile walk, going up the fjord. Little or no wind. The ice foot is strongly ridged at Provision Point, but the power boat is all right.

At dinner we drank to health and

happiness of our friends at home, (62)
 our own success in getting out this year,
 the success of leader and staff of the C.H.S.,
 the prosperity and honor of our country
 and for an enduring peace in the world
 all in the last drops of the whiskey
 that I brought away from Sydney.

This evening I strung the Museum
 pelage series into five bunches of
 ten skins each and labeled each
 "Pelage series - A.M.N.H."

Complete record of foxskin boxes:

1 - 19 blues	+	2 whites	= 21	30.XII
2 - 16 "		1 "	17	
3 - 19 "		2 "	21	
4 - 14 "		0 "	14	
5 - 26" (6 little ones)		3 "	29	
6 - 6 "		11 "	17	

The blues include 19 grays, 4 of wh
 were later transferred to the whites, making
 the numbers 96 + 23 respectively. 3 blues
 lack the tail. 6 blues are cub skins
 1 white lacks the tail

7 - 24 blues } 31.XII

8 - 24 blues (1 without tail & 1 little one)

Added the poor white skin rejected
 by Peter last May + whole collec-
 tion comprises - blues 129 (4 w. no tail)
 grays 15 (6 bladdered)

white 2 # (very poor)

168

Pelage series 50

Kappetah " 74

Residue 44 (sent to Rasmussen -
 to be)

Late in the evening Mac in my (163
presence placed the tin boxes into
their wooden cases, which he nailed
up and I addressed to "P. French
or C A Hansen, N Umenak".

Regular blizzard has raged all day,
but the Eskimos said about 9 p.m.
that the stars were beginning to
come out.

Put on my kooletah at noon and
started out for my usual walk but
I found the storm so bad and the air
so thick with driving snow that
I did not go off the bank. I walked
around the house and came in-
doors again to continue reading
"The People of the Polar North".
I finished the interesting book early
this evening and wrote a letter
to its author.

We had great sport this evening
with a trick bottle based on the old
"bottle imp" of experimental physics.
Mac rigged up the contrivance last
night with a bent glass tube entering
a cork but not penetrating it, a
short piece of tube being let into the
underside of the cork so that it looks
as if the long tube entered the bottle.
One blows into the tube to make the
imp go down, but it will not go
because the pressure is not trans-
mitted. The bottle should have flat
sides. The imp will descend if one
squeezes the bottle. Accommo-
dinguak and Mayak got quite ex-
cited over their efforts to drive the
imp down.

19 January. Friday. 172

B, N5; C4, N5; B, N5; B, N5; B, N5; B, N5. av. -11.3
-13.5; -12.5; -12; -11.5; -7. min -16.2. max -6.
The storm lasted till after midnight
but to-day has been a good day.
Walked up to Pe-ah-wah-to's Point
and back, 4 mi.; in comfort,
wearing my nettia. The gale must
have been fierce in the fjord yesterday
for not only is little if any new
snow left, but also much of the old
snow adhering to the ice has been
torn off and carried out to sea
leaving large areas of bare or near-
ly bare ice. Walked 1.15 to 2.45 p.m.

This morning I cut down a partly
used zinc plate from the Edison
cell and fitted it into one of
the carbon cells and the improvised
battery works all right.

Worked on vocabulary and devel-
oping plates.

20 January. Saturday.

-11; -7; -3.5; -3; -5.5. min -11.5; max -2 av. -5

Calm in lee of hills beyond our river.

Walked up a little beyond Pe-ah-wah-to's Pt.
Worked on vocabulary. Developed a
few plates.

Mac walked out to edge of ice,
which he reports as being in
line with second island. Good
prospects for next spring.

The bodies of two of his pups (173) were found to-day. They were the best two too. One got caught on the hill before the blizzard and was afraid to come down. Hunger and the storm finally drove him down, but he lost his way in the blinding snow and froze to death. The other, the biggest of Mac's bunch, got mixed up with some of the big dogs here and was killed. The half-eaten body was found on the ice or ice foot by Kah-wee-ahk-suk.

Across fjord at midday, a two mile walk that was not very agreeable on account of the high wind and the smother of drifting snow in the air. Getting lighter every day!

Excitement to-day was the breaking out of a fire in We-We's igloo beneath the house. Igloosukhni was down there in Mayak's care, but the men went to sleep and the boy upset the stove or spilled the oil out of it somehow and set stuff on the bed platform afire. The smell of smoke a-wakened Mayak and he put out the blaze before much damage had followed. Dangerous all right

showing the need of the constant watchfulness that we exercise. (174)

Weight, in angora sweater as usual, 175 $\frac{1}{2}$

22 January. Monday.

Two + mile walk. Up fjord. Midday. Wind was very strong and keen till I got well past the river bed and under the lee of the great cliffs. Then the wind was moderate and walking enjoyable in the brightening twilight. It does not take much daylight to surpass the best moonlight.

Captain came in from taking the 8 p.m. reading saying that the sky was cloudless, but that there was considerable haze and some snow in the air. Quite a combination. Evidently the frost was forming in the lower air like dew.

Some work on C. L. E. Relief.

Got to reading over some parts of Ben Hurr.

Inaloo brought over a netlike

(netsha) which had just made (175) ^{she} for Igloosuahmii and showed it to me with pride, the boy being in it. She is a good grandmother all right, though only a step-grandmother at that, having fitted out the children in full suits of skins for their trip to Umnaruk. Kahkotik finished his kamatik.

The snow storm which began before midnight last night has continued all day. When I went out at noon for my walk I found 8 inches of light new snow on a level and the air so thick that I did not go very far - only $1\frac{1}{2}$ mi. I took a look at the power boat and found my wife sealing apparently untouched. I did this because Accommoding was last night reported hearing dogs at the boat.

This hold up is a serious thing for the Eskimos and may be for us too. They are out of dog meat and are not able to get any on account of the ice conditions.

They have released their dogs (76) now and there are about 100 of the animals wandering around house and igloos looking for scraps. Dangerous business for the pups! Nellie (Jot's bitch) had pups within a day or two and evidently they have been eaten, for she was in the bunch of dogs that went with me on my walk today. Jot was going to kill them anyhow, hence he has been saved a disagreeable task. When I took our refuse can out this morning to throw it away, it slipped out of my hands as I neared the brink of the bank and it was instantly pounced upon and buried out of sight by 25 or 30 snarling dogs, which devoured its contents eagerly.

24 January. Wednesday.

2; 4; 0.5; -2.5; t.5. Min -31 max +7 av. 0.9
Disagreeable day, being murky and the air thick with vapor and drifting snow. Ca $1\frac{1}{2}$ mile was walk enough for me, the snow making progress laborious.

The snow-fall may be put (17)
down as being about ~~12~~ 12" for
this storm. Drifting snow in
good shape. Let it go! It can't
go too rapidly for either us or
the Eskimos, the meat supply
being already low. Panikpuk
is out of oil as well as meat.
Ahweeak goodlak brought her
baby over this evening in spite of
wind and drift. He looked cute e-
nough in his little fur bag,
but he is almost destitute of clothing.
Worked on C.L. S. Relief, vocabulary
and developing features. Geology.

Up to Pee-wah-toe's Point about midday. Last night's strong wind blew all or almost all the new snow out of the ^{inner} fjord and the walking is fine once more. Found the frozen body of one of Mac's pups that he lost a fortnight ago and brought it in. The skin will make good mittens and the rest good dog food. Calm or very little wind beyond our river gorge.

Following Mac's example, I have fitted a lantern globe to my old lamp and am getting better light this evening than I have had for several weeks from the lantern that I have been using.

Saw raven today for first time
in many weeks.

Two or three days ago Mac cut a hole through the outer (S.W.) wall of the old dark room and moved his transit in from the snow igloo (ig-loo-ee-ak) under the bank, which has become useless through sagging of the roof and damage by dogs. This evening he got his first observations from the new observatory. Lavender hue now in sky

Three + mile walk in outer fjord. Man-
tle of snow 3-6 inches thick still
lies over most of surface making
walking laborious. Crossed track
of wolf near inner island, same as
reported yesterday by the returning Es-
kimos. Jot started for Starr Island
for meat but did not get there on ac-
count of open water, which he re-

encountering off the inner. (180
most island.)

The seal meat as baked today by
We-We was first rate, lacking the
disagreeable flavor (due to its being
killed while rutting?) which the flesh
of the same carcass has had thus far.
She has some Eskimos trick for get-
ting rid of that flavor. Meat is
too scarce just now to permit
our giving this seal away, as we
should like to do.

My weight today before dinner 176.5 lbs.

29 January. Monday.

To Pee-wah-tox's Point, 4 mi walk.
Midday. Calm in lee of cliffs beyond
the river gorge.

Mac went out along north
shore and back over land -
Reports ice out just beyond Pro-
vision Point and between the
islands south of us. Says that
he has not seen open water so
far in at this time of year
before, since he has been here.

Finished reading Norton's geology -
am enjoying Bret Harte these days.
Developed a box of plates.

Noo-kar-ping wak reports that

Koo-ko-loo-ting-wak has (181) spread the statement along the middle coast that he (K) is going across Melville Bay with me this spring. This is a relief to my mind because Mac sent word to him for me that I wanted him to take the job of getting me to Upernivik in April and I have been getting anxious to have K. come in so that arrangements might be perfected. Mac thinks that he is surely on his way hither now with Arctic and our supplies from Umenak and that the party is held up below Cape Alexander by bad ice conditions.

Noo-kar-ping-wak says that Egingwak suah, Egingwak paluk and Iago (Pingsasut) took their wives with them when they went south with Rasmussen, Ekblaw and Hunt. He thinks that Ek went with the smaller Nehitalahs (^{now} Hartigan) and not with Egingwak paluk. N. says he does not believe that Peter was able, physically, to go south this winter at all.

30 January - Tuesday. (182)

another beautiful day, though windier
along the north shore, where I took my
three mile walk at midday, than it has
yesterday.

C. L. E. Relief. Photos &c.

Eskimos report seeing a wolf ca
1/4 mile from the house. They
got some hares to-day, Sammuk
bringing two. The fur is excellent
now.

Mac cleared snow drifts from
shed roof in front of his window
and and the neighboring window
of the dining room.

Sammuk and Munnis'ooq
have been using the old dark
room as their igloo for a week
or so. A night or two ago the
young folks had great sport
in Ahk-pood-i-sa-o-s'ooq's (?) igloo,
Oodee going through some
kind of mock marriage
with the new couple.

My pulse 11 p.m. counts 50.

3 February. Saturday (185)
B, N26; B, N27; B, N27; B, N26; B, N26
- 4.5; - 4; - 6; - 6; - 8.5. min-9, max 10.5 Av. - 5.8

Two mile walk at midday. Crossed
fjord to point beyond Dog Island.
Wind much stronger out in fjord
than at and near the house.

Accommodating way reports
hearing the wolf beside the igloo
just N.W. of the house last night.
Great speculation among the
natives as to who will get it.
Mac cleared the snow drift away
from the other dining room
window. It is pleasant to be able
to see that there is daylight out
doors, but we shall probably
notice a decrease in the warmth
of the room. Iot took out one of
the double windows and set a little
oil stove on the sill to keep the
frost off from part of the glass
so that we can look out.
The dogs seem to like to look in
too.

My pulse was 60 when I returned
from my walk. Now - 10.30 p.m.
it marks 50 again. I understand
that the Eskimos have slow pulses -
Etook a 5'00q, for example, 28 yrs old,
showing 50 at one time and 60 at another.
Samniik, 17 or 18 yrs old, has a pulse
of only 46 or 48. Mac does not

notice any difference in his (86
own pulse from what it is at home
Nor does Captain Conner.

4 February. Sunday

B, ~~E~~ 9; B, E 8; B, E 5; B, E 7; B, N 2 Ice 52°
-10; -10; -5; -3; -6 min - ~~6 min~~ - 1

My midday walk was about $1\frac{1}{2}$ miles long
and very laborious, the wind being stronger
than on any day when I have been
out before. I kept near the north shore
intending to go across the fjord far-
ther up to Dog Island. But the gale
roared so fiercely out in the middle
of the fjord that I gave up the project.
When I was leaning up against a gust
of wind, its force suddenly lessened and
my feet slipped out from under me
and I fell. Before I could get up again
a still stronger gust struck me and
blew me along prostrate as I was on
the ice for 35 feet before a snow
stopped my progress and allowed
me to rise. When the squall had
passed I measured the distance
over which I had been blown on the
ice. I got back to the house a few
minutes before Sammick, Kah-
we-ahk-puq and Kah-da started
up the fjord with Mac's team rab-
bit hunting. In about a half hour
they were back, both the former
lads having been blown down on
the ice. Some wind! "Regular
Esk weather," Mac says *

This evening a pane of glass (187) in one of our front windows was smashed in by a dog which was on the roof of the shed struggling with another dog over a bone. The snow drift was cleared away too soon.

Have been reading today Captain Tyson's account of the famous drift of himself and party on an ice floe from Littleton Harbor southward. A terrible journey.

Developed a dozen plates this evening. The edge of the ice stretches across the fjord from abreast of the point facing the small islands. Our men have never seen it so far in so early in the year.

5 February. Monday.

Myaq and his family plus Anahdoa,
Tatiq and his family, Inutiq
and Pooadloona, five Kummaticks
got away for the south this morn-
ing ~~via~~ ^{an} the ice cap. Their dogs were
sorry looking objects for lack of food.
Panikpung and Ahtooksoongua went
up to the head of the fjord to ~~hunt~~
rabbits and get moss for stove
wickings and I rode up with them.
The wind was almost ahead and
was very keen. I walked on across
the flat and the lake to the front of
the glacier, where I examined the
roll of lake ice which has been
formed by pressure from the mov-
ing of the glacier since we were
there late in October. This roll
is in front of the northern one-half
of the end of the glacier and is over
10 feet high at its highest point.
Mac has seen it larger than it
is now and in the form of an open
arch which he and others entered.
Then I followed the Kummaticks
tracks along the south side valley
of the glacier and overtook ~~Mac~~ ^{Myaq}
Myaq and Pooadloona getting
their party up to the top of the
glacier where Mac and I and

our party went up last fall (191
to set our stakes. The men had
gotten two teams of dogs up by
means of steps cut in the hard
snow. When both teams were
fastened to a long piece of a gloopa
and having ^a comparatively level
surface to work on pulled two
loaded sledges singly up the steep
bank. Pooadloona fastened his
almost empty kommatik to
the second loaded sledge and
then drove his team right up
the side they getting aid enough
from the tow to enable them
to negotiate the slope.

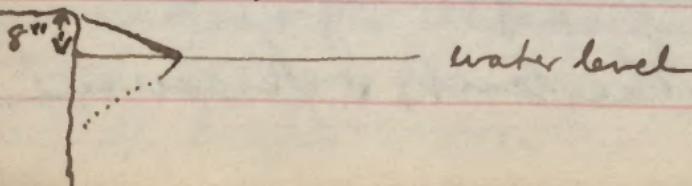

I went on up to our line of
stakes. I thought that I could
detect a sag in the middle
of the line, but there was not
light enough for me to see
clearly and be certain. Here
I found Satiag and his party,
after hearty good byes, I climb-
ed down the glacier here and
walked all the way home, —
a good eight miles in all, I
should think. Lake ice is bare
of snow and would furnish
good skating.

Sammik and Munsus'ooq (192) moved out of the old dark room, where they have been living for some weeks, and into Ahneenah's igloo, where they will live with Ahweegeah and Ahweahgoodlah. This change is made possible by Myaq's departure and is highly pleasing to us, because it reduces the chances of a fire in our house.

10 February. Saturday.

to's Point. Calm under lee of cliffs.
Beautiful day, but Mac could not

see sun from top of Thernow - (97)
eter Hill by reason of low fog. Temp.
up there - 23.5°

Panikpuk, Ahtooksoonquah and
Kahkotiah started for Anorotok
overland this afternoon. As I watched
the men packing their kahmatiks,
I could not help thinking that Billy
Hofer would consider them putters
at the job. Nevertheless an eskimo's
sledge is a compact affair when he
gets his load all lashed together.

These folks have some seals cached
at Anorotok. Hence they are going
over to feed their dogs and themselves
and they hope to get a bear or two.

Worked on vocabulary most of
day - Tediums job!

Good aurora spanned the sky this
evening \approx 9 pm. as a narrow band from
S.E. to N.W. Mac said it was one of the
best he has seen here, but it was not
nearly so strong as the one we saw at
Parker Snow Bay on Christmas, 1915.

17 February. Saturday

Four mile walk: Peewahltoq's Point.
Midday. Beautiful day, and Mac
has rewarded for climbing to top of Ther-
nower Hill by seeing sun at
noon about $1\frac{1}{2}$ degrees above horizon
over Cape Alexander Glacier. This
must have been above horizon yester-
day and possibly day before, though

Hidden by the clouds and fog. (198)
To-day ^{had} had clear view of opposite
shore of Smith Sound.

Work on vocabulary continued.
This evening Ina has brought in
the net'l which she has made for me
for Sister and I gave her an old cart-
wright and Warner short sleeved under-
shirt for it. Really too much but
it was the only personal thing that
I had. She seemed much pleased.
I hope that the odor can be taken out
of the garment, when I get it home!
It is a good one and pretty, as such
things go.

18 February. Sunday $\text{Ice } 56\frac{1}{2}''$
 $B, NW 4; 0, E6; 0, E7; S, E8; S, NW 5$
 $-11; -10; -14; -14; -14.2$ Min -16.5; max -5.1
Two + mi. walk at mid day. Wind strong
and gusty out in fjord, seemingly from
NE or ENE rather than E but the outer
fog showed that a southerly was blowing
there. To-night a bad storm with much
falling and driving snow is aaging,
which will probably havoc with the ice,
at any rate breaking up the young ice
that has formed during the past few days.
Mac is afraid that the present long
delay in our Eskimos' getting down
to Umanaq and back may affect
his spring plans unfavorably.

Av. -7.6

Three mile walk at mid-(199)
day, going up the fjord along north shore.
Thick and disagreeable as well as very
windy. Some of the men came in
from their caches this morning via
ice cap and said it was very bad,
but Ahweegeah, who came in
a few hours later, said that there
was no strong wind up there.
This wind is very local.
Storm here cleared away this af-
ternoon, and it is beautiful out
this evening. The Eskimos say
that they are going to start south
ward tomorrow, - to We-ank-
da-hau-ni anyhow and probably
all the way down to Oomanaq.
Some of them, however, will stop at
Peteravik for the walrus hunt.

When I undertook to move my mattress
this evening, I ~~found~~ that it was frozen to the
wall partition which separates my room
from the workshop.

20 February. Tuesday.

Out at midday to point about 2 mi
from here by sinuosities of coast where
two too-picks stood once on a little isthmus
of gravel; - a lovely spot for a sun-
shower camp, fresh water being obtainable
from not distant pools, then. Most
of my walk was on the ice foot, the sea
ice being all gone from a point within

1/4 mile beyond Provision Point. The fjord in fact is a remarkable sight now, the open water coming in abreast of Provision Point out in the middle of the bay and beyond. Saw about 60 sea pigeons near the edge of the bay ice. Most of them were in their white winter plumage, but a half-dozen or so were in their black coats. From a point about a mile from the house I got my first view of the sun this year. His disc at noon was about $3\frac{1}{4}$ above the flat top back of Cape Alexander. He will soon be visible at the house at sunset. At two spots the ice foot was scarcely $2\frac{1}{2}$ feet wide. I hugged close to the cliffs in passing them!

G.C. took 4 p.m. reading without lantern.

Went over to Hayes Harbor and visited Sontag's grave. That young man was one of the tragic sacrifices to the exploration of the arctic. Peary and MacMillan have put the stones there in order. After Hayes left the Eskimos broke open the cache like mound forming the tomb and appropriated the wood of the coffin. Peary found the skeleton wholly or partly exposed and he put the bones together placed stones on them and re-erected the headstone. Sontag was 29 when he

died. Inscription on the slab (201
of quartzite forming the headstone
In memory of Hays gives
August Sornitzay the age as 28
Died Dec 1860 in "The Open
Aged 29 years Polar Sea".

The cove would have formed
a very poor place for a ship
this winter. Since before the mid-
dle of January there has been little
or no ice there beyond ~~at~~ 150 yards
from the head of the bay and of
course except the ice foot.

I started to follow the ice foot a-
round the point into the harbor,
but did not like the looks of a
steep snow bank lying on it
at the base of a cliff and there-
fore climbed over the point.
By doing this I missed meeting
Mac, who had come across a
neck of land to the harbor and
went out along the ice foot. He
said that the snow slope was
not hard, as I had feared.

I saw some white sea pigeons
at the entrance to the harbor,
but no black ones. The Eskimos
say that they have never seen any
black sea pigeons at this time.

year and that the light (202
must have deceived me yes-
terday. That, however, hardly seems
possible to me, since I saw the
birds at different angles with
reference to the sun. I should
like to confirm or disprove my
observation.

Some more ice has gone out
of Etah fjord and another sizable
cake is ready to go out. Along the
southern shore for a half mile back
from the point the belt of ice is
narrow, being apparently not
more than 100 yards wide for some
distance

22 February. Thursday

S, SW4; S, SW4; S, SW5; S, SW5; 0, SW1;

4.5; 3; 2; 0; +0.6 Min -1.8; Max +6 Av. +2.2

Thick, stormy, disagreeable day, but the continued SW wind has driven the young ice and slush in against the shore ice and ice foot so that the Eskimos say that it will freeze now so that they will soon be able to go south by the sea route, which is much easier than that over the ice cap.

So much soft snow has fallen that I soon turned back from the fjord to-day as I sank nearly to my knees much of the way. I finished my walk on land eastward and less than a mile in all of that was enough to satisfy me. When I asked Accommodinash when he would start for Wee-ahk-dah-lan-ni all he could say was "Kah-no" with an expressive shrug of the shoulders as he gazed out to sea. He and Etookas'ooq have built snow-block wind breaks in front of their igloos, the latter's being a continuation of the wall and roof of the vestibule to his tunnel entrance (tök-sook).

Etookas'ooq's patient watching for two days at the seal hole near Dog Island was rewarded to-day, and shortly after noon we saw him dragging in a good-sized seal across the ice. Great was the rejoicing in his igloo. A sudden exodus from our house later was explained when we learned that Alruiah had cooked some meat. All hands help a family get rid of their meat. She brought some in

forms this evening, for which (204)
we are glad since our own supply
of fresh meat is well-nigh exhausted.

It has given us an ~~too~~ exceptionally
severe dose of pro-German ~~wall~~ talk
this afternoon. There is no such thing
as convincing him or stopping
him and his statements and ar-
guments are amazing for their
inaccuracy and at times for their
shrewdness.

It seems as if this storm had given
us at least 15 inches of snow on the
level. I estimate that we have had
perhaps 6 feet of snow thus far this
winter, but there seems to be no
way of measuring the amount of
fall in this windy place.

The Eskimos finally got away this morning at about 10:30, and they have had a beautiful day for beginning their southward journey. They were going only as far as We-ank-dah-ni to-day, where they will feed their dogs, preparatory to going on to-morrow and the weather looks promising to-night for another good day.

Five Kalmatics and thirteen Eskimos were in the party, as follows:

Accommodingwaq and Inaloo, Kahweahktisuk and Kahda, Nookarpingwaq, We-we and their two children,

Etookas'oog and Alniyah, Sammik, Ahwegeeah and Oodee.

Only Munisooq, Ahweagoohlo and the latter's 6 weeks old baby are now left in the village. The girls act lonely, but their husbands are coming back with meat tomorrow or next day.

I started out on my walk ahead of the bunch. They overtook me near the southern point, but I overtook them again on the south side of the strait between the point and Radcliffe Island where they were leaving the old ice for the rough new ice lying between there and their destination. Cordial farewells were interchanged. I like (Accommodingwa calls me his "Upah")

several of these people and shall (206) miss them, but most of them are coming back to Etah after a few weeks. The new ice is rough, being composed mostly of new cakes joined by young ice. I continued my walk to Radcliffe Island and then came back through the southern part of the bay. Southwind 2-3 out there.

Captain feels lost without Lizzie to care for, though he says that he will be glad of a rest from the child.

The direct rays of the sun reached the house at 1:45 p.m. and we felt as if spring had come, although the temperature was around -7° and we knew that some of the worst weather of the season was due to come during the next few weeks. Such is the psychological effect of the sun. We have all bleached out a good bit during the long absence of the sun, but it seems to Mac and me that the natives show it more than the white men. The Eskimos are yellow now, some being almost ghastly in complexion. The sun will soon change this again.

Mac gave us a Victrola concert this evening which we enjoyed in quiet.

We are economizing on coal now and let the fire go out between meals.

26 February. Monday. (207)

-18; -19.5; -20; -19.2; -18.8 Min-20.9; Max-10.8

Three mile walk at midday. Across
fjord. Wind strong and keen, but
not nearly so bad as it was yester-
day and there was practically no
drift.

Samnik and Ahwegeeah each
got a rabbit to-day and each
brought us one-half of his animal.
If Samnik had brought us
the whole of his, then all of the others
would have been needed in the
igloo and Ahwegeeah would
have had nothing with which to
trade for tobacco &c! The boys who
work for us have a hard time of it
trying to do their duty by us and
at the same time keep in with
the Eskimos. Often our boys are
forced to let other men kill game,
when the chance is really for ours,

in order that they (the other natives) may be able to trade with Mac. Accommodingah made Sammick bring up his (A's) meat from Weank dahamni instead of his own, because A. wanted to get something from us. So it goes. But then noblesse oblige should rule here as well as elsewhere, probably.

C.L.E. Relief article.

Mac walked over to Hayes Harbor today. He reports most of the ice gone out again south of the island.

3 March. Saturday.

We thought that it was going to be another lovely day to-day, but the sky became overcast before noon and fine granular snow fell most of afternoon accompanied with haze or fog.

Beautiful evening. Sammuk took some oil up to Liftoat Cove (Polaris winterquakes) for Mac. Jot started out with him, but he could find only part of his team and that was so poor that he turned back before long. He was complaining of the grippe yesterday but has been feeling better today.

During middle of day I walked over to Hayes Harbor (Port Fouche), going out around the point and coming back across the neck of land at the head of the bay. Hayes says that the top of this is 110 feet above the sea and that the lower terrace, on which is Sonnags grave, is 32 feet above sea level, but both of these values seem to me to be excessive. There are at least two places in the icefoot of the north side of the bay where the boys must have found it ticklish work getting by with kahmatik's last week. Five mile walk. Very thick on return.

At dinner today we drank 6/2
a toast to the incoming president,
for the success of the administration
of President Hughes and the contin-
ued prosperity, happiness and peace
with honor of our country. But
after dinner Job got off on one
of his characteristic tirades about
the European war. If his knowl-
edge of facts were more accurate
he would not get so far astray in
his arguments as he does. He seems
very strongly pro German, and to
think that the U.S. is acting the
fool - but I cannot tell how
much in earnest he is. I guess
he likes to stir things up.

Somebody asked Ahwegeeah
what he had had to eat to-day.
He replied "Only tea", but he seems
to be contented. He is lazy all
right and merits Captain Comer's
nickname for him of "Barnacle".
He seems willing that Sammick
should supply the meat for the igloo,
still he does go out after rabbits
occasionally. The baby's name, one
of his names at any rate, is Peewahto.

Dr. Wueff and the Eskimos left this
morning about 11 o'clock, leaving
Akklo and Akkipoodisaos'ooq and
their families but taking Ahwegeek
and his family - 8 Karmatiks in all.
They went via the ice cap and I rode
to the glacier with Teddilingway -
visited the line of stakes and walked
a quarter mile or so farther up on the
glacier. Dr. Wueff tells me that
there are some narrow transverse
crevasses in this (Brother Johns) gla-
cier near the cap itself.

I could not tell by the unaided
eye whether the stakes had moved
during the winter or not, though
the southern one third of the line
had sagged a little westward
in ~~the~~ its middle. The roll in
the lake ice has greatly increased
in length and the southern half
of it has been extended as well
as raised. It is now about 15 feet
in maximum height above the
level of the lake ice, the side toward
the glacier is slightly overturned
past the vertical (stoss side) and
there is a 2 ft. \pm hollow in the lake
ice on the far (western) side. Made
a seven mile walk in all. Sam-
mik overtook me off our river
gorge. I might have ridden all
the way down the fjord!.

This evening we made out (215) list of new clothing to be made for me for my trip - sleeping bag, kamiks, stockings, pants - and started Ahneenah on the kamik pukas. He gave Kolootengwag 2 cases of pemmican and 10 gals oil to take with him for use on my trip southward. I gave K. 24 kroner with which to buy the material from Peter for a new kahmatik for the trip. Ahkoodisaos'og made a lamp body from a cornmeal can.

While Dr. Wulff was here he told me about the hard time that he and Peter had in trying to reach Cape York in many. Jariu dry. First they were turned back by open water near Cape Athol. Then they crossed the ice cap to the glacier at the head of Cape York Bay, but they could not get down that to the sea ice. For fourteen days they battled with the crevasses and had several narrow escapes from disaster and then they turned back. Dr. Wulff had been over the same route in November without encountering the crevasses, but in the intervening two months the glacier had moved 8 or 10 kilometers, apparently. The sea ice in Cape York Bay has not gone out entirely in many years, they say. Evidently the pressure of the glacier accumulated until it suddenly overcame the resistance with the effect above indicated. I hope that I shall be able to see something of this wonderful phenomenon - as far as the sea ice is concerned at least when I go south.

8 March. Thursday. (216)

Three mile walk in outer bay. Two or three
inches of new snow.

Long talk with Mac in evening about
Expedition affairs. He is very much exer-
cised and even bitter over some of the
events up here. He reports that Fitz
claimed to be solely under U.S. Govt
control and to have no responsibility
toward the Expedition or the Museum.
all that Fitz wanted was Crocker Land
and he practically refused to do more
than a nominal amount of work, -
i.e. he did not set up the seismo-
graph, did very little magnetic work,
mapping to &c to that property fell
to him to do. Jerome was a
willing and hard worker, not
alone on the wireless experiment
but also wherever and whenever
he was called upon for anything.
Ek is a thorough scientist, fully
interested in his duties and
alive to his opportunities, though
difficult to get along with
in some respects. Tark was

good to live with and a de- (218
terrined traveler, excellent for
arctic life and work, but not suf-
ficiently interested in zoölogy or
zealous enough to do the work that
lay around him and for which
there were adequate facilities and
apparatus at hand, though he
could not have the power boat
sometimes when he wanted it.
Mac holding that walrus must
be procured for dog and man food.
Dr. Hunt and Jot were not men-
tioned in this discussion, I
think. Mac thinks that I ~~have~~ ex-
ceeded the Museum's authority
and interfered with his position
and work up here in an unwar-
ranted manner during the
first months of my being at Par-
ker Snow Bay, while I hold that
there was justification under the
circumstances for what I did
and said, and that both he and
I seem to have been misrepre-
sented to each other by Peter
French and others including
some of the members of the staff.
Some of my words certainly have been
quoted out of their connection
and in a misleading way. No

harm, deprivation or un- (219)
warrantable interference were
intended to be done or exercised
and I meant to act with jus-
tice toward him and others at
all times, including the foxskin
matter. Some questions be-
tween us will probably have to
be settled after our return to the
Museum.

What seems to have been an earth-
quake shock was recorded between
2.37 & 2.42 p.m. If this be correct,
the shock was a very heavy one
coming from the north and
perhaps originating in the belt
from Japan to Sumatra. We
got only the central part of the
shock on the N-S component,
the lighter tremors not being
caught.

12 March. Monday. ^{av. 8.44}

a dull, raw day. Mac thinks that
may be entering on a period of
storms. Two mile walk be-
tween 2 & 3 p.m., bringing in more
oil from the Point. Busy looking
over letters bearing on last night's
discussion. Mac asked me to keep the
seismo record in my care.

13 March. Tuesday. (2202)

Had quite a job today clearing
the drums of the seismograph, those
of the smoking apparatus, putting
new improvised zincs into the
batteries and clearing and filling
the cells. The apparatus ought
to be all right now for Captain
Comer's operation for several weeks
after I have started southward.

Dug away the snow from in
front of one of my windows and
put a slate across the lower panes
to prevent breakage by dogs. It
seems nice to be able to get along
without a lamp, for even a part
of the day.

Three mile walk in outer bay after
5 p.m. The water is in close to Star
Island again. Brought in some
more oil.

Saw a fine parhelion to the west
of the sun early this afternoon.
Two were reported yesterday.

Gave canvas covered plate box to Mac

14 March. Wednesday.

Akklio and Akkhoodi said 5'000
started for Igloodahauri this
morning and they have had a

wonderfully fine day for making (221)
ing the first stage of their journey. They
are likely to stay at Siltuaddi
tonight. If they are going for
8 took a s'ooq for Mac's trip and
to get a dog or two belonging
to Arkliu(?). If they find ac-
commodingwah anywhere
they are to ask him to come to Etah
at once to help take me down
to Oomanaq. If they do not
find him they are to bring
back two men from Igloooda-
hanni for the purpose.

or if he cannot or is unwilling
undertake the journey with me

If Accommodingwah comes up to
take me down, Mac is going
to send up to anasotok for
Paniukpuk to serve as the second
man.

Fixed a large dog biscuit box to
serve for the transportation of note-
books, papers, shore clothing &c to
south Greenland

Four mile walk before dinner.
Peeuwahto's Point Calm and lovely
in the lee of the cliffs beyond the
gorge.

This morning I showed (222) him Eki's ~~letter~~ letter giving his desired plans for 1916, with my endorsement on it "approved, subject to authorization by D. B. Mac Millan, Leader." Dated 13 Nov. 1915. I did this trying to prove to Mac that I was not interfering unwarrantably with his prerogatives as leader. I acknowledged that my first instructions to Captain Comer (23~~XXI~~.15) might be construed as assuming more than had been decided upon with reference to North Star Bay. But all this was of no use apparently, for it seemed evident that he still thought that I had exceeded the Museum's authority in these and other acts. I told him again that the arrangements with Nene and with Egingwah and Siuaho were distinctly tentative and that I had loaned Nene the rifle, not given it to him, on 23.XI.

There is no use in talking any of these matters over any further with Mac while we are up here. I am willing to abide by what the Museum may say.

15 March. Thursday.

good thing that the men got away yesterday, for this would have been a bad day for them to cross the Cape Alexander glacier. We hope that the cold is enough to make the new ice solid enough to resist the strong wind that is blowing.

Fixed up my last oil box and packed my new "trunk" for Uper-nivik.

Two + mile walk on inner bay but wind was too strong in gusts to make the exercise very agreeable. ^{Mac gave Captain an Iceland sweater,} adding much to latter's comfort.

16 March. Friday

-23.2; -22; -18.8; -21; -23.2, min -23.2 max -13.9

Two + mile walk at midday. Brought over last three tins of oil from Provision Point for my trip and closed the box. The wind continues strong but the temperature remains low. This cold snap is all to the good for Mac and me, and perhaps it will be the last one of the winter. I hope it will be!

Morris'oo is a pretty smart girl and is industrious. Too bad that Sammick does not like her. Quite probably he will not keep her for his wife. A few days ago she

A few days ago she finished a (224) kooletaq for Mac and it is well made and fits him well. It is only the second she has ever made, but she had no help or advice apparently from either Ahneenah or Alvingwah and she made it better and more quickly than Alniyah made one for Etookas'ooq a few weeks ago. Munni is ^{now} first. Kooletaq was made for Sammik some weeks ago and likewise was very good.

To-day I got ahnoak patterns from Mac for Inetiaq, Munni-s'ooq and Ahneenah, promising to replace ^{last two} ~~these~~ from Thule, if possible.

17 March Saturday.

B, 87; B, 27; O, 87; C6, NE 6; B, NE 4 av. -23.92 -22; -23.6; -24; -25; -25. min -26.8; max -13 Sundry preparations for trip. Work on seismograph. Two mile walk after dinner.

Between 7:30 & 8 p.m. there arrived six kahmatiks bringing Arikis, Akkhoodisao's'ooq, Etookas'ooq, Alniyah, Iopunga, Mahksaak and Inngel-to (Ooblooria's brother). Within an hour Tauchingwa also came in. He says that he is going south.

with me. Hence the main part (225) of my caravan is arranged for. But I hear that Ahnggodibloo-as'og also wants to go, and perhaps I shall have an embarrassment of riches!

The party came over the ice cap from Seluaddi to the cove south of Harg's winter quarters. They say that it is all right and that the sea ice is exceptionally good south of Seluaddi. They say the ice cap was cold.

18 March Sunday. Ice 64.5"

Tanchingwa and Inugeto say that they wish to start back tomorrow, hence I have spent the day - i.e. between seismograph time and dinner boxing my alcohol and trading tea etc for the trip, in order to send two good loads on to Oloogset by them. It looks as if I were going to have close to 900 lbs of stuff to transport, but only about 160 lbs of this is baggage, the remainder being food, fuel and trading material. I shall have to have three kahmatiks all right, though my loads will grow lighter from Ooniamag onward.

Ahneenah has made me a fine new sleeping bag today, having

worked skillfully, rapidly, and steadily. (226)
and steadily. A good job!

Four mile walk after dinner.
Peeawahto's Point. air was hazy and
very thick, with fine granular snow
falling.

Weight this evening 175 lbs.
Told Mac that I wanted accom-
modating enough to bring some
one with him for my journey as
far as Dolooqset or Netchileevik.

This evening I tried Mac's lens
in my graflex camera box and found
that it fitted perfectly, but it ought
to for it is exactly the same as my
own lens. I told him that he
might take both my cameras and
their plate holders across to Elles-
mere Land with him, thus giving
him an addition of 48 exposures
without reloading. He is going to take the graflex only.

The anvil fell off the bench
today while I was working at it
and would have struck one or
both of my feet, had I not jumped
away in time. It was a
sufficiently narrow escape
from present disaster to my plans
and lasting injury to myself.
It broke the board which it lay
ed on in the floor.

19 March. Monday. (227)

-16; -12.2; -14.2; -11.5; -9. Min -16.8; max -8.5

In spite of the wind and the smother of driving snow, Tauchingwag, Inugetog and I opungwag started back to their homes this morning, getting away about 11 o'clock. They took the rest of my oil and pemmican and my alcohol and a box of sundries. Mac sent word for Oobloq iah to come up with accommo-dingwag Wednesday or Thursday.

I gave my old sleeping bag to Tauchingwag, to his evident delight as he had none and needed one for our trip.

Was so busy all day that I did not get around to taking my walk until about five o'clock and then the blizzard was so bad that I did not go out of sight of the house, but walked along the bank and stood around for an hour of fresh air. The smother of driving snow was so thick that it seemed unwise to go out onto the fjord.

~~macless fits me, graphix all in~~

Wrote instructions regarding seismograph five mile walk before dinner, inner bay and up to Peewahlto's Point. Light is very trying on such a hazy day - icebergs very blue.

21 March. Wednesday. (228)

0, D, N7; S, SW3; S, S2; S, W2; S, SW3

-7; +1.2; +4; +3; -2.4. min -8.2; max +7

Started Captain Comes on the seismo-
graph work. Fixed up batteries again
fixed up some letters and papers.
Half hour's walk in the storm,
just before dinner.

Had our closing game of poker.
Six months lacking two days,
and Mac wins the pipe.

In the previous series two years
ago, Mac won. The prize was
a silk hat. We say that now
he ought to be required to go
down the street in N.Y. smoking
the pipe and wearing the hat
at the same time!

Mac said to day that he
was going to take my graflex
+ his lens and Jot's 4x5 film
camera and not take his
3A and films. He is going
to save the films for the homeward
trip on the ship. Although it is my
own outfit that enables him to
do this, and he knows that I can't
get any 3A films in Greenland, he
does not offer me any more rolls
beyond the 5 that he gave back to me
two or three days ago. He keeps 10 rolls.

There are lots of 4x5 plates (229) here and he has many cameras, so that he would have plenty of the best kind of outfit for use on the ship, if he were to let me have all the 3A films. It seems therefore as if he might help me out a little more (say another \$5) for my interesting journey.

9: C. took 8 p. m. reading without lantern.

22 March Thursday

0, S, S22; S, N, 3; 0, N 3; 0, F, S3; 0, F, S4

Packed one of my grips today. Last night took my last bath, I think, before starting southward - my next one will not come before I reach Upernivik, I fear.

Two mile walk in early afternoon, bringing in some salt from the Point. Disagreeable day.

All set now, except for a little sewing which Ahndenah can easily finish tomorrow.

At 9:30 this evening, just as Munni's oog was sitting down to putting patches on the elbows of my shirt, the noise of arriving kahmatiks was heard. Munni dropped the shirt as if it had burned her and she and all the eskimos in the house rushed out doors to see the new comers. Some one returned announcing accommodinguag, Bobloqiaq and Ah detkahngwag. Mac went out and I followed.

as soon as I could get on cloth - (230)
ing enough for an outside tempera-
ture of 14 or 15 below. The men
have splendid teams of 16 and
17 dogs respectively. We did not
suppose that they would come to-
day on account of the weather, but
the wind was at their backs and
the sea ice was in such good con-
dition that they came by the
usual route over the Cape Alexan-
der glacier. I suppose that
this means that I shall start
on my trip day after tomorrow,
unless the weather takes a
turn for the bad. Well, so be
it. I am both glad and sorry
to go. I am enjoying life here
now pretty well and the
trip is quite an undertaking
for a man with so little ex-
perience; but I am anxious
to get home just as early as
possible and the journey
itself will surely be filled
with interest and instruc-
tion, if I can stand it. I have
the ship to fall back upon at
Oomanaq, however, or I should
scarcely dare undertake the

600-650 statute-mile journ. (231)
ney to Upernivik. By the time
I reach Oomanaq, and certainly
by the time I get to Cape York,
I shall know whether it will
be wise for me to undertake the
crossing of Melville Bay.

This ahdeka hingwaj was
Peewahtooq's wife. She is the
original of the "Mother of the
Seals" and is the mother of Sam-
mie, Ahweahgoodlae, Kahda,
Choo'gingwaj and Peter. Her
looks belie the account given of
her by Dr. Cook in "My attain-
ment of the Pole". She brought
some flour with her so that
I might make some bread
for her.

23 March. Friday.

0, SW3; 0, S3; 0, F, SE3; 0, F, SE3

-17.1; -18; -17; -15.6

Two more kahuatiks arrived early
this morning, bringing S'ikka-
shoonaq and Oqwig. The former
is the odd genius who was at the
"Cluett" last spring from whom Cap-
tain Pickels got an old bow
drill, the latter is brother to Ahng-
wah.

waq. I understand that (232) they are on their way to Smith Sound on a bear hunt. Mac is going to have their help with his load as far as Anorotok.

To-day I gave Munnis'ooq my old celluloid soap box, which she has long been admiring and showing to the other women, and an anna-ahk pattern. She only grunted as Eskimos usually do, and it might be hard to say whether she was pleased with the gift or not. I gave Ahneenah an ahnoahk pattern on account of the sewing she has been doing for me and she was more satisfactory, for she seemed ~~per~~ really pleased. Both women are being paid by the expedition, hence these gifts were in the nature of fees.

Two mile walk, inner bay, early afternoon. Hard to realize that the temperature has been so low to-day, for there has been so little wind that the house has actually been uncomfortably warm. Jot has been doing some baking for us and also for Ahdeka hingway.

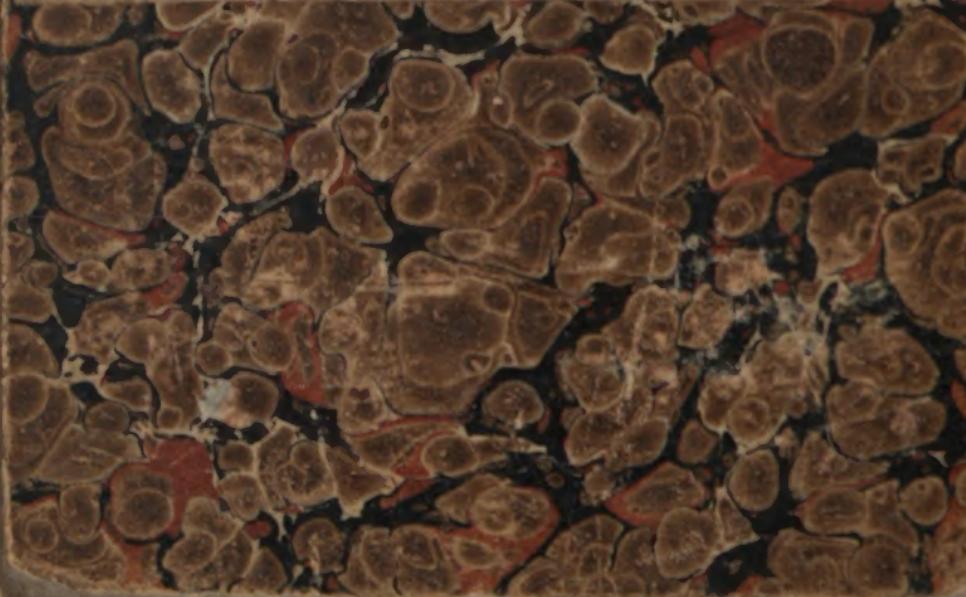

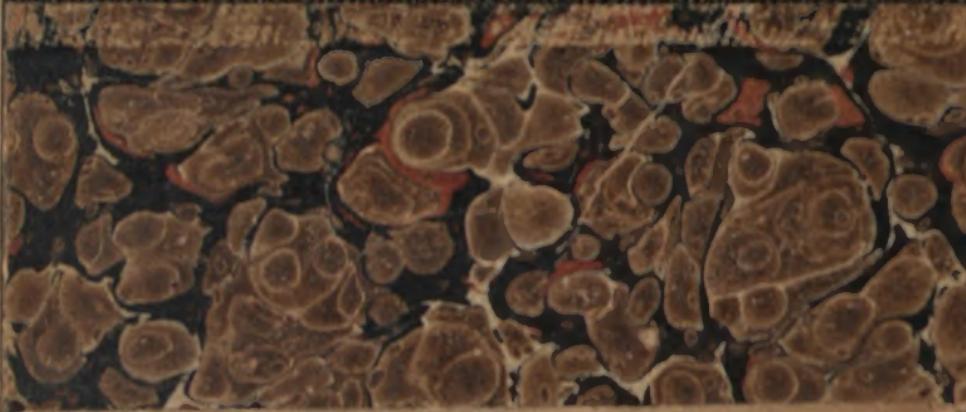

There are always plenty of "last things" to be done after one thinks himself all ready to go, so that I have been busy to-day and have kept Munnis'ooq occupied much of the time too patching and repairing. She has made a pair of good rabbit skin stockings

out of the two old pair that I (233)
have been wearing for more than
a year. Ahneerah's sewing for
me has been the making of a sleeping
bag, 1 pair of bear skin kamiks, 4 pairs
and three pairs of rabbit skin stock-
ings.
